

VH

High Static Pressure Ductable
Fan Coil Unit

New : available with EC motor

Models 03 to 27

200 to 4650 m³/h

General Characteristics

Presentation

The new ducted high static pressure fan coil units VH have been designed to replace the two ranges VHF and VH2N, and give the following advantages :

- Single range,
- Configuration flexibility thanks to a modular conception,
- Filter offer with more important efficiencies (G3 and G4),
- Significant energy savings thanks to EC motor offer,
- Better acoustic performances in low speed operation,
- Thermal performances identical to the VHF and VH2N ranges,
- Dimensions reduced and low embedding height,
- ERP option for certain European market.

The **VH** range is specially designed to meet the job requirements that call for false-ceiling installations and for air distribution by ductwork requiring high static pressure (up to 220 Pa for larger units).

Composed of **9 models** (VH03,05,07,10,15,18,21,24 and 27) to ensure air flows up to **4650 m³/h**.

In order to meet your applications, the **VH** range is available in 2-pipe, 2 tubes réversibles, 2-pipe/2-wire, 2 tubes réversibles/2-wire and 4-pipe systems.

Different types of configurations

The VH models are available in **three configurations** :

- With rectangular return and rectangular discharge duct connections as a whole part of the unit casing,
- With rectangular return and circular or oblong discharge duct connections,
- With circular or oblong return and circular or oblong discharge duct connections.

The circular or oblong duct connections are provided with 2 or 3 circular (160, 200 or 250 mm diameter) or oblong (250 mm equivalent diameter) connecting collars according to the unit sizes (VH 03 to 10).

The discharge duct connection is insulated with 10 mm thick closed cell polyethylene foam having M1 fire classification.

Casing

Fabricated from 1.0 mm thick galvanized sheet steel with the fixing brackets located at the top part of the casing for installation to the ceiling.

The condensate drain pan is made from 1.0 mm thick galvanized sheet steel, painted and is externally insulated by 2 mm thick closed cell polyethylene foam, having M1 fire classification.

An optional auxiliary drain pan can be provided to collect condensates from coils headers.

Access to internal components (fan-motor assembly and coils) for service and maintenance works is facilitated by dismantling the central bottom panel of the fan coil unit, without removing the distribution ducts.

The hydraulic and electrical connections can be carried out at the same service side or at the opposite service side.

Fixation

The unit is supplied with 4 slotted fixing brackets as standard.

Coil compartment

It is lined with 10 mm thick closed cell polyethylene foam insulation, having M1 fire classification.

It incorporates water coils which are fitted with 1/2"Ø female threaded couplings for models VH 03 to 10 and with Rc 3/4" to Rc 1"1/4 male threaded couplings for larger units.

The coils used in VH range have, according to the unit sizes, different number of rows as stated below :

- 3 rows (2-pipe system) and 2+1 rows (4-pipe system) for VH 15,
- 4 rows (2-pipe system) and 3+1 rows (4-pipe system) for VH 03, 05, 07, 18 & 24,
- 5 rows (2-pipe system) and 4+1 rows (4-pipe system) for VH 10, 21 & 27.

Coils are leak tested under water (21 bar) and are suitable for a maximum working pressure of 10 bar.

Fan compartment

It incorporates a fan-motor assembly of which the fan is composed of double inlet forward curved type aluminium wheels and galvanized sheet steel scrolls.

The **VH** range can be supplied with **2 types of motor** :

- The **standard motor** available on all sizes, is of direct drive type having 4, 5 or 6 speeds (3 speeds pre-wired) according to the models. The motor is suitable for nominal voltage of 230 V / 1 Ph / 50-60 Hz and is equipped with a built-in thermal overload protection of automatic reset type.
- The **EC motor** available on VH 03 to 10, is of high efficiency and low electrical consumption type for a significant energy saving. The motor is suitable for 0-10V input, ensuring variable speed capability. It is fitted with Ecospeed3 interface card (supplied as standard) for a 3-speed optimized running.

Relays for fan speed control are fitted, as standard, on VH 15/18/21/24/27.

Options and accessories

→ Air filter :

Filter consists of cleanable synthetic media (sewn on wire frame), having **G3 or G4** classification.

Filter is removable and is easily pulled out downward for cleaning or replacement, after removing the access metal plate.

→ Electric heater for 2-pipe/2-wire system :

Electric heater consists of heating rod type resistances equipped with a manual reset and an automatic reset high temperature cutout switches. The electric heater On/Off control, made thanks to a relay, can be mounted as optional.

Standard voltage is single phase 230 V.

→ Fresh air intake and plenum :

The fresh air plenum is supplied as standard in case of configuration with circular or oblong return duct connection.

The intake of fresh air can be assured by a pre-cut opening of Ø 100 mm or 125 mm (VH 03 to 10, but Ø 100 mm only on VH 03), Ø 160 mm (VH 15 to 21) or Ø 200 mm (VH 24 & 27) located at left or right side of fresh air plenum.

→ Regulation valves :

On/Off (thermal type actuator), 2-way or 4-way type for 2-pipe or 4-pipe systems.

Valves are not available for model VH 27. Valves for models VH 03/05/07/10 are supplied mounted, those for models VH 15/18/21/24 are supplied loose.

→ Controls :

TRM, TAE, Aqu@Simp or Aqu@Net.

→ Condensate pump :

Supplied fitted on VH03 to 10, loose on VH 15 to 27.

→ Fuse holder :

A fuse holder with fuse can be supplied as optional to protect the unit.

→ MO insulation :

For ERP (Building Receiving the Public) applications, the VH range can be equipped as optional with a MO fire classification internal insulation.

VH Advantages

Improvement of acoustical performances - Example of a VH 07 in low speed

Thanks to the choice of a new fan-motor assembly, an acoustical gain of 5.5 dB in low speed is obtained on certain models.

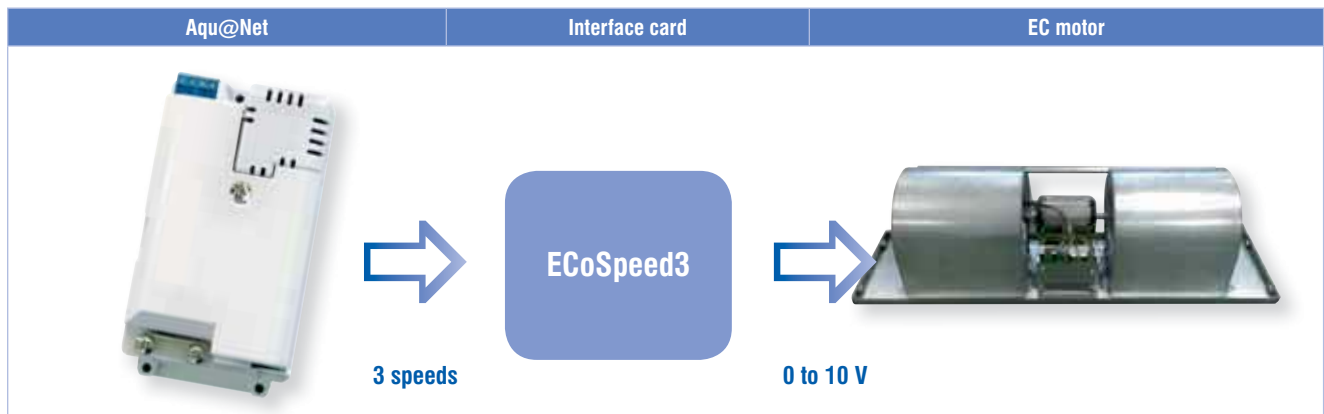

Energy savings with EC motor - Example of a VH 07

With the use of EC motor (optional), an important reduction of the consumed power can be realized.

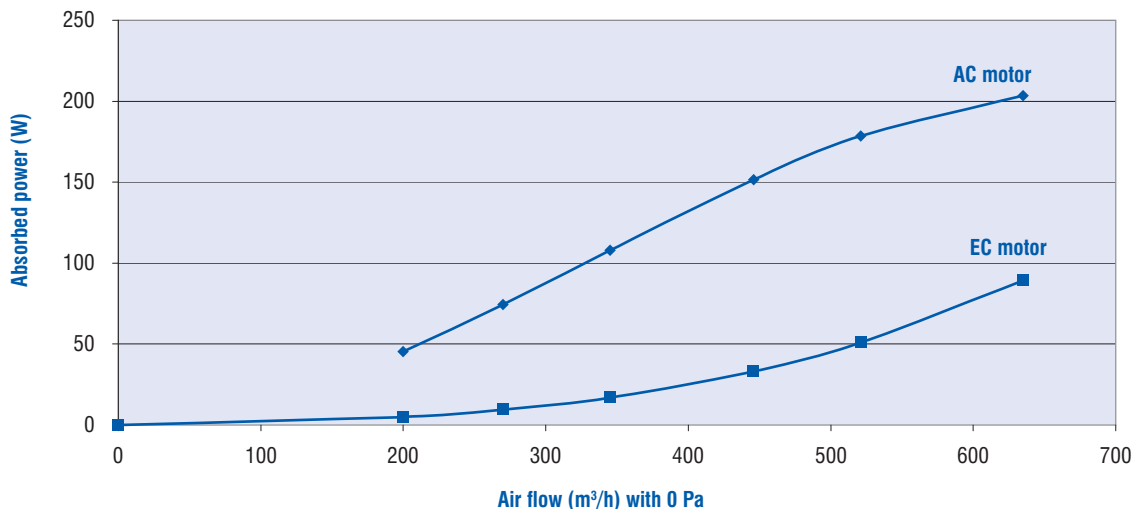

3-speed control interface for EC motor :

EC motor/AC motor Absorbed Power Comparison

VH 03

Air flow (m³/h)	AC motor absorbed power (W)	EC motor absorbed power (W)
0		0
200	46	5

- (1) According Eurovent 8/2, data given for a unit with :
 - 50 Pa external static pressure in medium speed (V3),
 - rectangular return and discharge,
 - G3 standard filter.
- (2) Data given for a unit with :
 - 50 Pa external static pressure in medium speed (V3),
 - rectangular return and discharge,
 - ducted return and discharge (1.5 m),
 - G3 standard filter.
- (3) Informative data, considering an hypothetical sound attenuation of the room and installation of 21dB.
