

## ELFOEnergy Ground Medium<sup>2</sup> - Multifunction

Water cooled heat pump with simultaneous hot / cold water production  
for indoor installation

### WSHN-XEE2 MF 10.2 - 120.2 RANGE

Nominal heating capacity (**W10/W45**) from 34 kW to 408 kW

Nominal cooling capacity (**W35/W7**) from 30 kW to 345 kW

- ▶ CHILLED AND HOT WATER PRODUCED AT THE SAME TIME
- ▶ PRE-ASSEMBLED CONTROL UNIT
- ▶ APPLICATION VERSATILITY
- ▶ HIGH EFFICIENCY

## Clivet hydronic system

Designed to provide high energy efficiency and sustainability of the investment, the wide range of Clivet liquid chillers and heat pumps for high efficiency air conditioning of Residential and Commercial spaces and for Industrial applications it is available with air or water source.

### HYDRONIC System - Water Source

Small and Medium Commercial		Large Commercial and Industry	
HOTEL ★★		Hospital

### Specialization

Every intended use has specific requirements which determine the overall efficiency. For this, the Clivet hydronic system always offers the best solution in every project.

- Modular range with over 8000 kW of overall capacity
- Capacity control with Screw and modular Scroll technology
- Multifunction versions
- Outdoor or indoor (ductable type) installation

#### Centrality of the Air Renewal

From the Air Renewal depends the comfort in the spaces. Since it often represents the main building energetic load, it also determines the running costs of the entire system.

#### ZEPHIR3

Autonomous primary air energy thermodynamic recovery system

- Simplifies the system, reduces the heating and cooling generators
- Purifies the air with the standard electronic filters
- Increases the energy efficiency and it also allows a savings of 40% on the running costs
- From -40°C to +50°C of outdoor air temperature

#### Terminal and AHU complete system

The hydronic terminal units are very diffused for their versatility and reliability. The Clivet range includes many versions that simplify the application in different types of installation and building.

#### ELFOSpace

High energy efficiency hydronic terminal units

#### AQX

Air-conditioning unit

- Cased and uncased terminal units, from 1 to 90 kW
- Horizontal and vertical installation
- Energy saving DC fans
- Fitted air conditioning units up to 160.000 m<sup>3</sup>/h
- EUROVENT certification

## ELFOEnergy Ground Medium<sup>2</sup>, three solutions to satisfy different installation requirements

### GROUND MEDIUM<sup>2</sup> - MULTIFUNCTION

#### WSHN-XEE2 MF:

- Reversible-cycle heat pump
- Chilled and hot water produced at the same time

### GROUND MEDIUM<sup>2</sup> - HEAT PUMP

#### WSHN-XEE2:

- Reversible-cycle heat pump

### GROUND MEDIUM<sup>2</sup> - COOLING ONLY or HEATING ONLY

#### WSH-XEE2:

- Simultaneous production of hot and chilled water
- Partial energy recovery

## Many applications require heating and cooling simultaneous production

Simultaneous opposite loads is a very frequent situation in many applications.

Large size buildings, different exposures and insulations and different purpose spaces make recurring simultaneously the request of heating and cooling.

Many different technical solutions could be used at this purpose. Clivet believes since ever that solution differentiation is the key for success and consequently present diversified solutions for answering to only apparently similar demands.

## Traditional way

The solution very common in the past is the independent production of heating and cooling thermal energy and transferring them to different ambient.

Thermal energy production thanks to one or many boilers and cooling power production with chillers is one possible solution. Low efficiency of such kind system is well known, indeed during the periods where cooling and heating are simultaneously required, cooling energy production rejects a large quantity of thermal energy to a source and this is the working principle of a standard chiller, energy that could be used instead, supporting for example other thermal energy sources or as total replacement.

## Enhanced hydronic system

Clivet, since ever pioneer of innovative solutions proposes Enhanced hydronic system as optimal solution for 90% of applications where simultaneous opposite loads are present.

Building blocks are:

- Magnum or SPINChiller heat pump
- Primary Energy decentralized system Zephir
- ELFOSpace fancoils

Thanks to a proper primary air design and using Clivet products around 30% annual energy saving is achievable and with a more competitive capital investment\*.

## MULTIFUNCTION Option

Hydronic multifunction units, able to produce hot water and chilled water simultaneously and independently is the optimal solution for some industrial applications or where the four pipe air conditioning system is required.

Heat pump product family called MULTIFUNCTION (MF) is the Clivet answer.

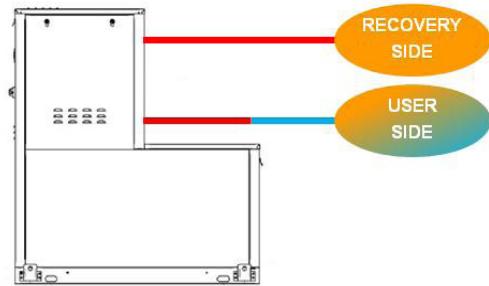

\*Dedicated documented.

## MULTIFUNCTION by CLIVET

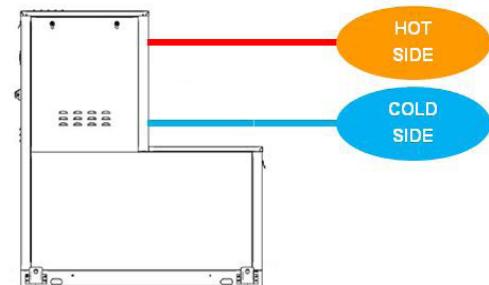

ELFOEnergy Ground Medium<sup>2</sup> MF is the new water-cooled heat pump product for the simultaneous production of hot and cold water.

Configuration available:

- **2T:** supply water for two pipe systems;
- produce chilled water or hot water to the system;
- supply hot water using the total recovery device for domestic hot water tanks, pre or post heating simultaneously with chilled water production;

- **4T:** supply water for four pipe systems;
- produce chilled water and hot water to the system simultaneously and independently.

## 360° of efficiency

During a whole year and during the same day heating and cooling demand hugely vary with hot-cool combinations very unstable, function of many factors, among others: latitude and altitude of installation, building features and functionalities of different ambient.

Unit will mainly work in simultaneous heating-cooling mode with varying combinations over the time.

Clivet unit distinguishes for this working mode offering the best efficiency performance thanks to used solutions.

Refrigerant scheme allows both the partial and the total recovery mode for the MULTIFUNCTION heat exchanger according to thermal energy required.

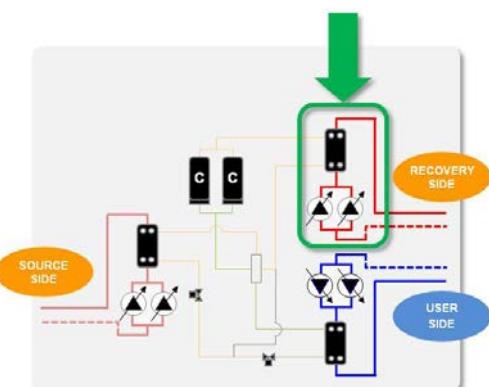

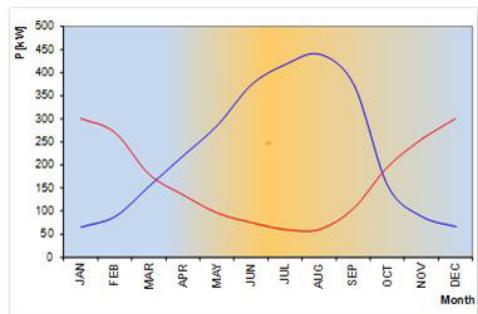

Completely automatic set-up and system control logic adjusts the mode according the most efficient performance.

During a whole year more than half of energy provided is produced during unbalanced capacity demand where MULTIFUNCTION offer the best performances.

Using the heat exchanger as a partial recovery device drives to an higher efficiency of 5% compared to solutions not using this working mode.

Real benefits in terms of efficiency and reliability:

- Few mode switches, reset where thermal capacity is less than 25% of cooling capacity;
- Improved reliability thanks to modulation and without on-off switches;
- Precise set-up thanks to modulation with less mode switches;
- Additional 3% savings on annual energy consumption comparing to standard multifunction units.

## ELFOEnergy Ground Medium<sup>2</sup> - Multifunction

### High energy efficiency in the annual cycle

The ELFOEnergy Ground Medium<sup>2</sup> MF technology is the energy reference for water source heat pumps. The unit may be equipped with modular scroll technology, ideal for partial loads, an electronic expansion valve for a quick and precise response to the actual service demand, and high performance heat exchangers. The high performance at partial loads of ELFOEnergy Ground Medium<sup>2</sup> MF makes it much more competitive and efficient compared to conventional solutions. Consequently, it reduces annual electricity consumption and increases the building's value.

### The modular scroll is the excellent solution for partial load

ELFOEnergy Ground Medium<sup>2</sup> employs highly efficient Scroll compressors, with spirals optimised for this type of use.

The advantages are:

- Compressors manufactured in large numbers on an industrial scale, with strict quality checks and highest reliability thanks to the high scale mass production volumes.
- The two sizes of Scroll compressors allow for several control steps. This way, only the necessary energy is supplied.
- Efficiency increase that can exceed 50% of the operation with part load, thanks to the larger thermal exchange surfaces available.

	OPERATION COOLIN-ONLY	OPERATION HEATING-ONLY
	100% EER = 4,63	COP = 5,42
	67% EER = 4,78	COP = 5,98
	33% EER = 5,00	COP = 6,21

Example referred size 45.2 at conditions:  
W35/W7 cooling only, W10/W35 heating only

### Electronic expansion valve

The thermostatic electronic expansion valve (TEE) adapts quickly and precisely to the effective load required for use, permitting a stable and accurate adjustment and optimal operation of the compressor.

There is also an additional increase in efficiency in comparison to traditional thermostatic mechanical valves (TEM) and a longer compressor life.

### Pre-assembled control unit

Can be supplied equipped with components that are often provided separately.

- **Reduces design times:** all accessories have been selected to assure outstanding seasonal efficiency.
- **Reduces installation costs:** the accessories are already connected mechanically and electronically wired up, are controlled by a single controller and tested to be ready for immediate use.
- **Reduces overall dimensions:** the construction and layout of the plumbing components at the back of unit makes it possible, when the heating or chilling power demand is very high, to run several units together, considerably reducing the overall footprint and freeing up space for other equipment while facilitating maintenance.

### Application versatility

Is suited to all types of room heaters, fancoil units, radiant systems and radiators.

Multiple configurations available:

- **Groundwater version and closed loop Geothermal version**
- **User and recovery side hydronic assemblies** with VARYFLOW+
- **3-way valve** for domestic hot water preparation on the recovery side
- **Source side hydronic assemblies** with VARYFLOW+ or, alternatively, 2-way modulating valve or 3-way modulating valve

## Water flow-rate continuous modulation (optional)

ELFOEnergy Ground Medium<sup>2</sup> MF allows for adopting various **hydronic assemblies on the user side, source side and recovery side**.

The energy used for the vector pumping is fundamental on the seasonal efficiency.

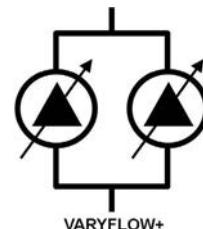

**The VARYFLOW + modulating pumping unit** made up of two pumps in parallel controlled by inverter, allows a precise water flow-rate modulation reducing notably the consumptions and at the same time it guarantees its functionality also in case of temporary unavailability of one of the two pumps, guaranteeing about the 80% of the nominal flow-rate.

The water flow-rate is modulated by keeping the supply/return water temperature differential constant.

When the system water temperature is critical, the **VARYFLOW+** controls the condensation/evaporation temperature by extending the operating range of ELFOEnergy Ground Medium<sup>2</sup>.

In case of particular installation needs, the hydronic assemblies are also available:

- **2-way or 3-way modulating valves** with electronic control, extend the unit's operating range by modulating the source water flow in relation to temperature.

## Advanced control

The control system combines in a single solution the operating efficiency and the user-friendliness.

Continuously monitoring all of the unit operating parameters, it ensures the maintenance of an optimal energy efficiency.

The control includes many safety functions and a complete alarm management.

It also includes advanced functions, such as daily and weekly programming and automatic maximum power consumption limitation (demand limit).

It allows the management of several units in cascade up to 1 master and 6 slave (Ecoshare)

The interface terminal is equipped with a backlit graphic display and a multifunction access keyboard. The multilevel menu is protected by different passwords according to the type of user.

## Remote control

The remote control allows accessing to the same functions that are accessible by the built-in unit user interface, and can be installed at a maximum distance of 350 meters.

## Remote system management

Thanks to the different available communication devices, the unit is able to exchange information with the main supervision systems by serial connections.

**Modbus®**

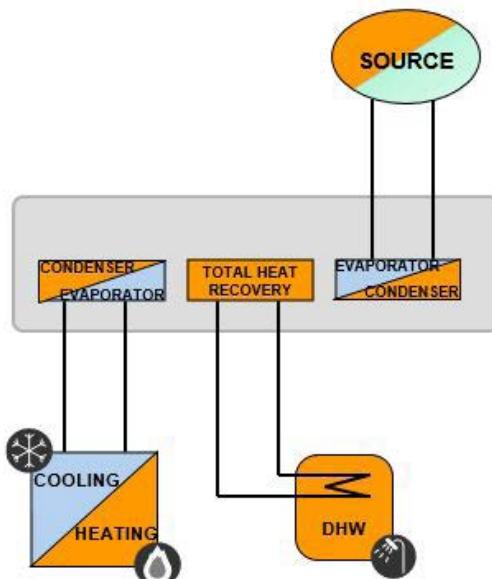

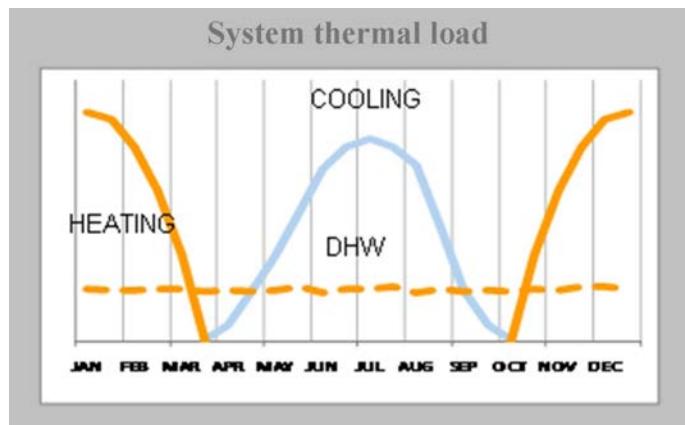

**BACnet**

**LONWORKS**

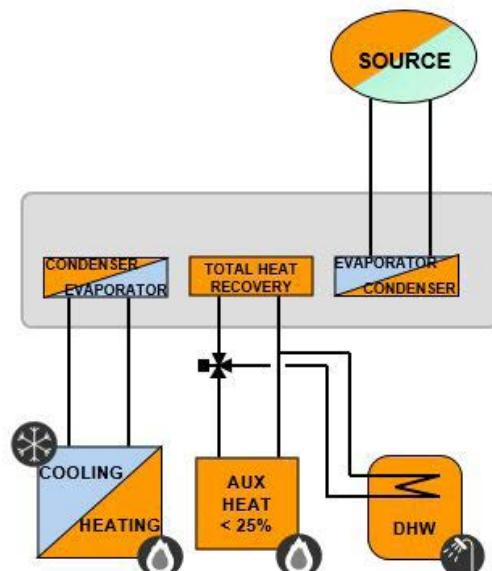

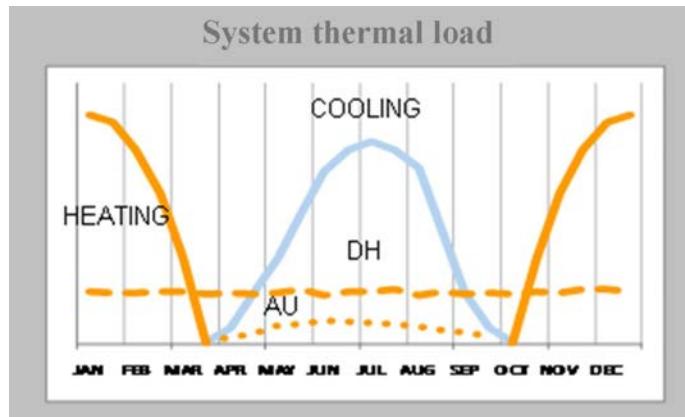

## ELFOEnergy Ground Medium<sup>2</sup> - Multifunction

### System solutions for reversible 2-pipe systems

- Production of chilled or hot water on the user side
- Production of hot water on the recovery side (Free in summer)

- Production of chilled or hot water on the user side
- Production of hot water on the recovery side (Free in summer)
- Priority hot water production with 3-way valve

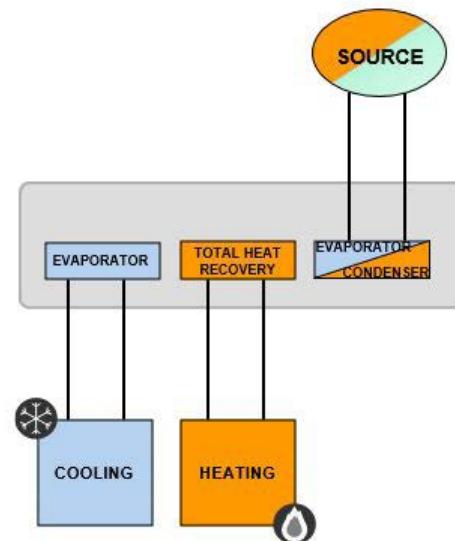

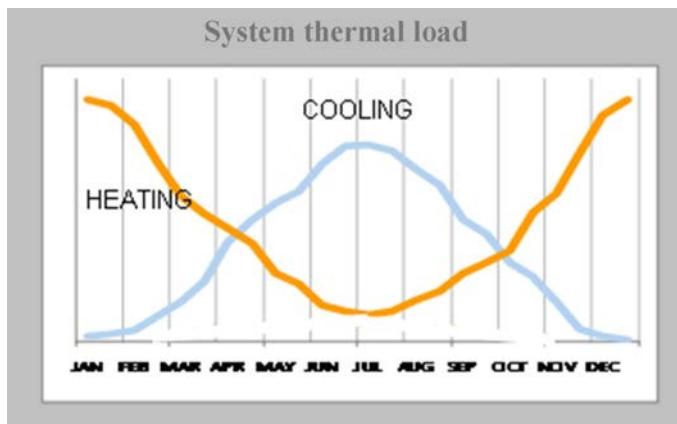

## System solutions for systems with 4 pipes

- Chilled and hot water produced at the same time

Utility side = Cold side

Recovery side = Hot side

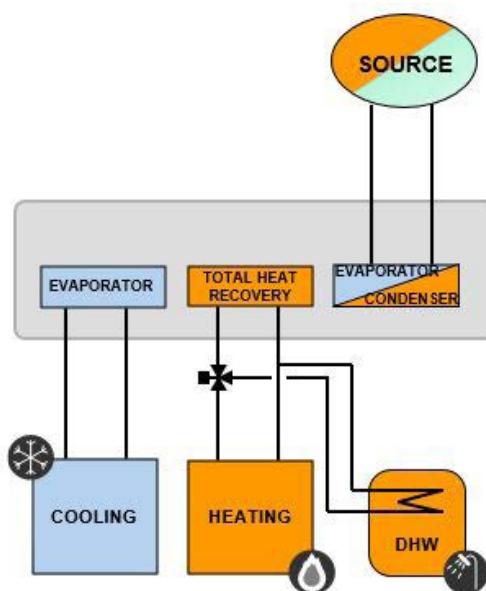

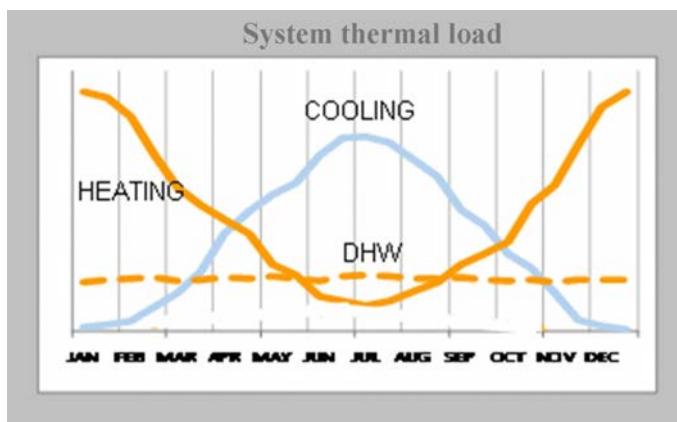

- Chilled and hot water produced at the same time

Utility side = Cold side

Recovery side = Hot side

- Priority production of domestic hot water, with 3-way valve recovery side

## Unit configuration: 2-pipe system

The Product is compliant with the Erp (Energy Related Products) European Directive. It includes the Commission delegated Regulation (EU) No 811/2013 (rate heat output ≤70 kW at specified reference conditions) and the Commission delegated Regulation (EU) No 813/2013 (rated heat output ≤400 kW at specified reference conditions).

'Contains fluorinated greenhouse gases'(GWP 2087,5)

1. Data referred to the following conditions: User side exchanger water = 12/7 °C. Supply side exchanger water = 30/35°C

2. The total power input is derived by adding the compressor power input + power input of the auxiliary electric circuit

3. Full-load EER, cooling efficiency coefficient. Ratio between the cooling capacity delivered and the total power input.

4. Data referred to the following conditions:

1) for system with 2 pipes (system heating): user side exchanger water 40/45 °C.

Source side exchanger water 10/7 °C.

2)for system with 2 pipes (heating demand side recovery without cooling system side): recovery side exchanger

water 40/45 °C. source side exchanger water 10/7 °C.

3) for system with 4 pipes: recovery side exchanger water 40/45 °C. Source side exchanger water 10/7 °C.

5. Full-load COP, heating efficiency coefficient. Ratio between the heating capacity delivered and the total power input.

6. Data referred to the following conditions: user side exchanger water 12/7 °C.

Source side exchanger water 40/45 °C.

7. Overall efficiency. Calculated as (cooling capacity delivered + heating capacity delivered)/total power input.

8. PHE = plate exchanger

9. Seasonal Space Heating Energy Efficiency Class according to Commission delegated Regulation (EU) No 811/2013.

W = Water outlet temperature (°C)

10. Data calculated according to the EN 14825:2016 Regulation

Sound levels refer to units with full load under nominal test conditions.

The sound pressure level refers to a distance of 1 meter from the outer surface of the unit operating in open field.

Noise levels are determined using the tensiometric method (UNI EN ISO 9614-2)

Data referred to the following conditions:

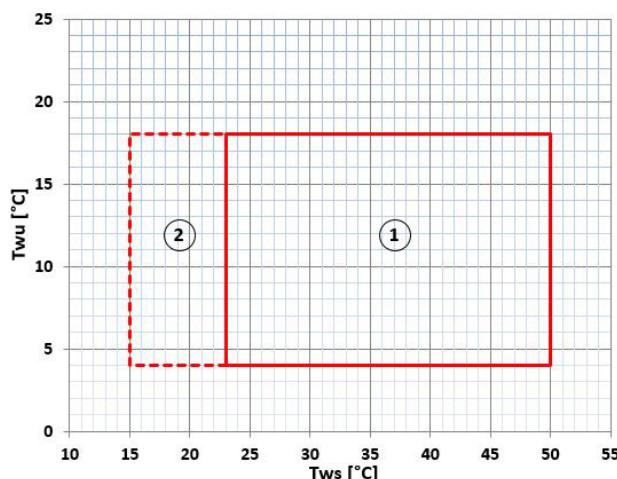

entering / leaving exchanger water temperature user side 12/7°C

entering / leaving exchanger water temperature source side 30/35°C

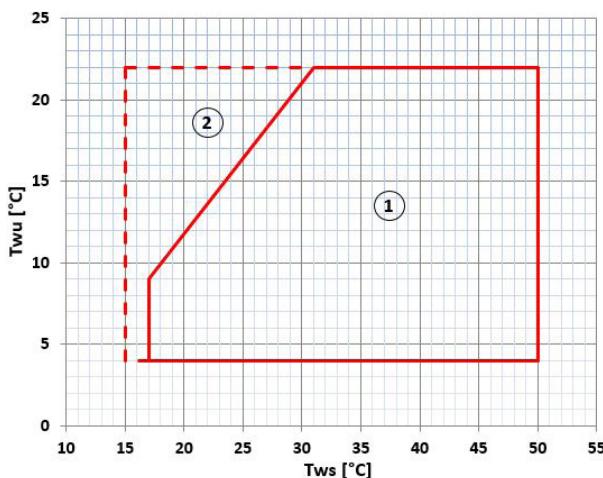

## Configuration for 2-pipe system and 4-pipe system

Antifreeze protection	[°C]	4,0	6,0	–
high pressure safety valve (gas side)	[kPa]	–	–	4500
Low pressure safety valve (gas side)	[kPa]	–	–	3000
Max. no. of compressor starts per hour (gas side)	[No]	–	–	10
Differential pressure switch (water side)	[kPa]	3	5	–
Max. pressure without hydronic assembly (water side)	[kPa]	–	–	1000
Max. pressure with hydronic assembly (water side)	[kPa]	–	–	600
Safety valve calibration (water side) (1)	[kPa]	–	–	600

(1) Available only with hydronic assembly option

# Standard unit technical specifications

## Compressor

Hermetic Scroll compressors with orbiting spiral, equipped with motor protective device for overtemperatures, overcurrents and excessive temperatures of the supply gas. They are mounted on rubber antivibration mounts and comes with a full oil charge. The compressors come with a thermal and acoustic insulation jacket. An automatic oil heater prevents the oil from being diluted by the refrigerant when the compressor stops. The compressors are connected in TANDEM on a single refrigerating circuit and have a biphasic oil equalisation.

## Structure

Supporting structure made with zinc-magnesium sheet metal that ensures excellent mechanical features and high long-term resistance against corrosion.

## Panelling

Outer panelling made of painted zinc-magnesium sheet metal RAL 9001 internally lined with heat insulation and soundproofing material. Each panel can be easily removed to give full access to internal components.

## User side exchanger

Direct expansion heat exchanger with braze welded stainless steel INOX AISI 316 plates and complete with external thermal/anti-condensation insulation. The exchanger has Victaulic hydraulic connections.

## Source side exchanger

Direct expansion heat exchanger with braze welded stainless steel INOX AISI 316 plates and complete with external thermal/anti-condensation insulation.

The exchanger has Victaulic hydraulic connections.

## Exchanger recovery side

Direct expansion heat exchanger with braze welded stainless steel INOX AISI 316 plates and complete with external thermal/anti-condensation insulation.

The exchanger has Victaulic hydraulic connections.

## Refrigeration circuit

Refrigeration circuit with:

- anti-acid dehydrator filter
- liquid flow and moisture indicator
- electronic expansion valves
- inversion valve of the 4-way cycle
- safety high pressure switch
- low pressure transducer
- high pressure transducer
- high pressure safety valve
- low pressure safety valve
- refrigerant charge

## Water circuit

### User side

- victaulic connection joints
- differential pressure switch, water side
- drain cock (only with hydronic assembly option)
- minimum circuit charge pressure switch (only with hydronic assembly option)
- safety valve (only with hydronic assembly option)

### Source side

- victaulic connection joints
- differential pressure switch, water side
- drain cock (only with hydronic assembly option)
- minimum circuit charge pressure switch (only with hydronic assembly option)
- safety valve (only with hydronic assembly option)

### Recovery side

- victaulic connection joints
- differential pressure switch, water side
- drain cock (only with hydronic assembly option)
- minimum circuit charge pressure switch (only with hydronic assembly option)
- safety valve (only with hydronic assembly option)

## Electrical panel

The capacity section includes:

- main door lock isolator switch
- isolating transformer for auxiliary circuit power supply
- compressor overload protection (in the range between 10.2 and 80.2)
- compressor protection fuse (in the range between 90.2 and 120.2)
- compressor control contactor
- double winding on compressor for reduction of inrush current (in the range between 90.2 and 120.2)

The control section includes:

- interface terminal with graphic display
- display of the set values, the error codes and the parameter index
- keys for ON/OFF control, cool and heat operating modes, alarm reset
- proportional-integral water temperature control
- daily, weekly programmer of temperature set-point and unit on/off
- set-point compensation with 0-10 V signal
- unit switching on management by local or remote (serial)
- antifreeze protection water side
- compressor overload protection and timer
- prealarm function for water antifreeze and high refrigerant gas pressure
- self-diagnosis system with immediate display of the fault code
- automatic rotation control for compressor starts
- compressor operating hour display
- Input for remote ON/OFF control
- potential-free contact for summer / winter change
- dry contacts to control the cumulative alarm signal remotely
- inlet for demand limit (power input limitation according to a 0÷10V external signal)
- double setpoint enabling
- potential-free contacts for compressor status
- phase monitor
- ECOSHARE function for the automatic management of a group of units
- 0÷10V signal output and potential-free contact for auxiliary heater
- enabling of DHW preparation in relation to remote consent
- numeration of electrical panel cables
- configuration for single on/off pump or service and source side modulating valve

## Accessories

- IFWX - Steel mesh strainer on water side
- SPCX - Set point compensation with outdoor air temperature probe
- VS2MX - Source side 2-way modulating valve
- VS3MX - Source side 3-way modulating valve
- CMMBX - Serial communication module to supervisor (MODBUS)
- CMSLWX - LonWorks serial communication module
- BACX - BACnet serial communication module
- AVIBX - Anti-vibration mount supports
- RCTX - Remote control
- VACSRX - Total recovery side DHW switching valve

## Operation and use conditions

Room temperature	Operating unit	Unit in stand-by*	Unit in storage
>50°C	NOT POSSIBLE	NOT POSSIBLE	NOT POSSIBLE
35°C < t < 50°C	✓ standard unit ✗ not compatible with Clivet integrated pumping device	✓ standard unit	✓ standard unit
0°C < t < 35°C	✓ standard unit	✓ standard unit	✓ standard unit
-10°C < t < 0°C	✓ glycol in an appropriate percentage (1)	✓ glycol in an appropriate percentage (1)	✓ glycol in an appropriate percentage (1)
< -10°C	NOT POSSIBLE	NOT POSSIBLE	NOT POSSIBLE

\* consider the unit powered electrically, with active control on pumping units. It is recommended to set a set-point value lower than standard (eco mode)

1. Operating range where the water pumping unit must be powered and always active, or with a periodical activation of the outdoor temperature operating pump to guarantee the correct unit operation.

At the unit start-up the water temperature or water with glycol must be inside the operating range indicated in the "Operating range" graph.  
To know the water freezing temperature on varying the glycol percentage refer to the specific 'Correction factors for glycol use' table.

## Source and user side minimum system water content

For a proper functioning of the unit a minimum water content has to be provided to the system, using the formula:

$$\text{Minimum water content [l]} = \begin{aligned} & 6 \times \text{kWf} \text{ (air conditioning application)} \\ & = 10 \times \text{kWf} \text{ (application with low loads required)} \end{aligned}$$

kWf = Nominal cooling capacity unit

Volume calculated does not consider internal heat exchanger (evaporator) water content.

# Electronic control

## Description of step start-up control

The electronic control allows to manage the unit depending on the requested load.

The compressor steps are activated to maximise efficiency from the lowest to the highest setting.

## Main controls

- Leaving water temperature control with PID algorithm: it keeps the leaving mean temperature to a set value.
- Auto-adaptive switching on differential: guarantees the compressors minimum operating time in systems with low water content.
- Condensation control based on pressure
- Pre-alarms at automatic reset: in case of alarm it is allowed a certain number of restarts before the definitive lock.
- Compressor operating hour calculation
- Compressor start calculation
- Control and continuous management of the compressor operating conditions to guarantee the unit operating also in extreme conditions
- Water temperature check (when used) to avoid the pipe freezing
- Alarm log
- Autostart after voltage drop
- Local or remote control

## Unit status display

By the user interface is possible to display:

- Unit operating mode and status
- Leaving/entering water temperature
- Refrigeration circuit temperatures and pressures
- Signalling of alarms and anomalies in progress.

## Probe, transducer and parameter display

A user interface dedicated section allows the maintenance or technical assistance personnel to control the unit operating status.

This section is accessible only by specialized personnel.

## Management of more units in cascade (ECOSHARE)

It allows the management of several units hydraulically connected up to 1 master and 6 slave maximum.

Units must be of the same type: all reversible heat pumps, or all cool only, or all heat only. Sizes can be different.

The communication among the units is via a BUS serial cable allowing:

- Supply water set-point setting of the slave units
- Setting of logics that increase the system energy efficiency
- Unit operating hours balancing
- Unit management in case of damage (only on slave unit)
- Hydronic assembly switch-off management of units not used

## RCTX - Remote control

The remote control allows the full control of all unit functions from remote position.

It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit.

## 2-pipe unit operating range

To ensure correct operation of the unit, the latter must be equipped with a flow-rate control device on the source side.

The thermoregulation is performed only on the water return temperature, to ensure the unit's stability and maximum efficiency.

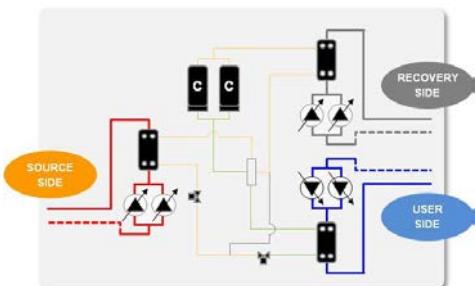

The unit is capable of producing chilled or hot water on the user side and, thanks to the total recovery heat exchanger, is able to produce domestic hot water for free simultaneously during summer mode operation and winter mode operation.

In order to limit the supply temperature variation at the capacity changing, it is necessary to select the hydronic assembly Varyflow+ user and/or recovery side with which it is possible to vary the water flow rate at part load getting closer to the desired  $D_t$ .

### Example of how the unit operates

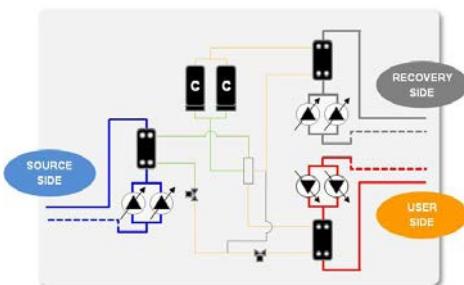

- System cooling only:**

In this condition, all the cooling capacity is released to the user side of the heat exchanger and maintenance of the user side set point is ensured through the modulation of the capacity steps. All the heating capacity is dispersed on the source exchanger.

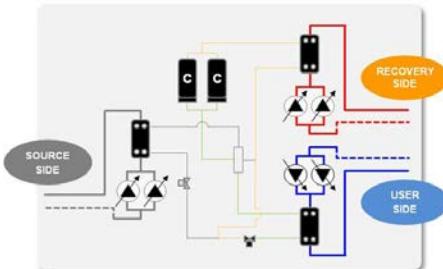

- System heating only:**

In this condition all the heating capacity is released to the user side of the heat exchanger and maintenance of the user side set point is ensured through the modulation of the capacity steps. All the cooling capacity is dispersed on the source exchanger.

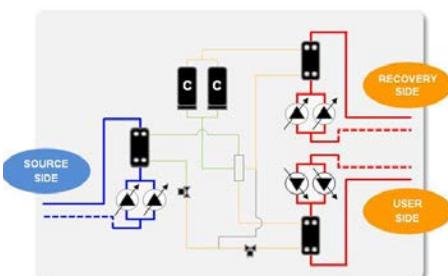

- System cooling requirements and free production of domestic hot water:**

In this condition, all the cooling capacity is released to the user side of the heat exchanger while all the heating capacity is released to the recovery side of the heat exchanger. The capacity steps are modulated so as to guarantee a constant set point on the priority side chosen by the user. In this condition, the overall efficiency of the unit, defined as (cooling capacity for use + heating capacity for recovery)/(total power input) is very high.

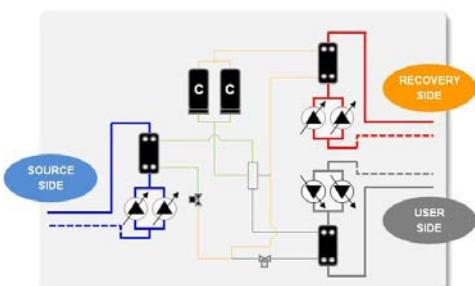

- System heating requirements and production of domestic hot water:**

In this condition, the heat is released at the same time to the user side and the recovery side of the heat exchanger. The total heating capacity that can be provided to the two points of use cannot exceed 100% of the unit's nominal heating capacity. The unit will manage the capacity steps considering both loads and through modulation of the flow-rate it will initially satisfy the primary point of use, reserving the residual capacity for the secondary point of use. All the cooling capacity is dispersed on the source exchanger.

- Requirement for the production of domestic hot water only:**

In this condition all the heating capacity is released to the recovery side of the heat exchanger and the load requirements are met through the modulation of the capacity steps. All the cooling capacity is dispersed on the source exchanger.

## 4-pipe unit operating range

To ensure correct operation of the unit, the latter must be equipped with a flow-rate control device on the source side.

The thermoregulation is performed only on the water return temperature, to ensure the unit's stability and maximum efficiency.

The unit is capable of producing chilled or hot water at the same time throughout the year. Chilled water is only produced on the user side (cold side), while hot water is only produced on the recovery side (hot side).

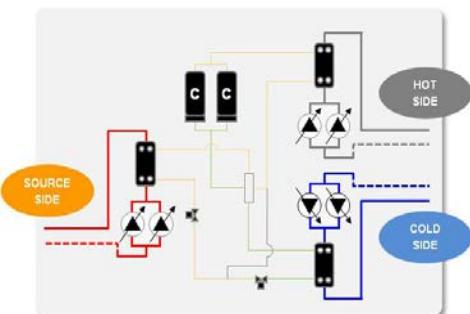

By equipping the unit with a DHW switching valve (VACSRX, accessory supplied separately), it is possible to prioritise domestic hot water production over system side heating requirements.

In order to limit the supply temperature variation at the capacity changing, it is necessary to select the hydronic assembly Varyflow+ user and/or recovery side with which it is possible to vary the water flow rate at part load getting closer to the desired  $D_t$ .

### Example of how the unit operates

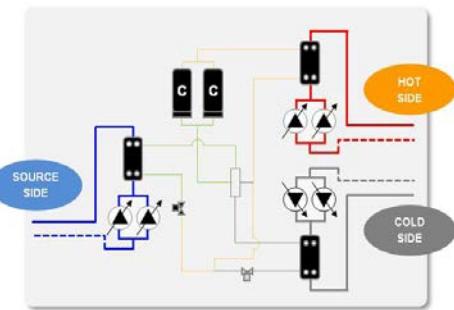

- Cooling requirement 100%, Heating requirement 0%:**

In this condition, all the cooling capacity is released to the cold side of the heat exchanger and maintenance of the cold side set point is ensured through the modulation of the capacity steps. All the heating capacity is dispersed on the source exchanger. The pump control on the hot side may be activated or deactivated based on a schedule to keep water temperature under control.

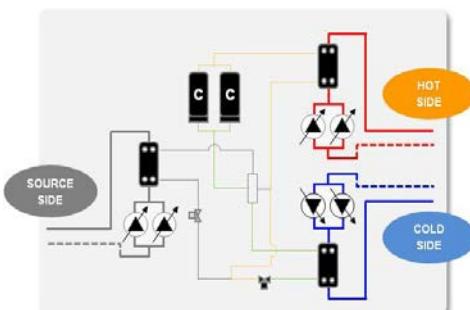

- Cooling requirement 0%, Heating requirement 100%:**

In this condition all the heating capacity is released to the hot side of the heat exchanger and maintenance of the hot side set point is ensured through the modulation of the capacity steps. All the cooling capacity is dispersed on the source exchanger. Cooling capacity is not released on the cold side: the cold side pump control may be kept activated at a minimum or it may be activated and deactivated based on a regular schedule to keep water temperature under control.

- Cooling requirement 100%, Heating requirement 100%:**

In this condition all the cooling capacity is released to the cold side of the heat exchanger, while all the heating capacity is released to the hot side of the heat exchanger. The modulation of the capacity steps is managed so as to guarantee the same hot side/cold side set point in relation to the operating mode used (hot side control in winter operation, cold side control in summer operation). In this condition, the overall efficiency of the unit, defined as (cooling capacity for cold operation + heating capacity for recovery)/(total power input) is very high.

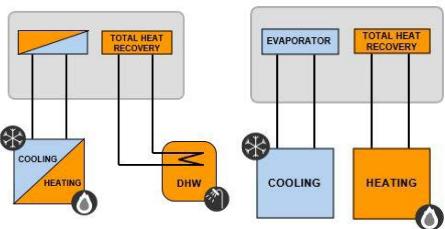

## User side and recovery side (2/4-pipe)

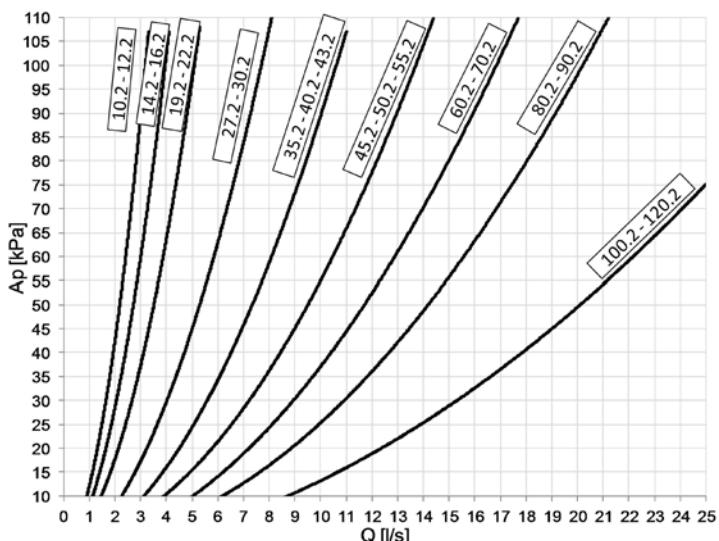

### Configuration: Standard unit (STD)

Configuration without hydronic assembly on the user side and recover side, but equipped with components as listed on the key of the enclosed plumbing circuit diagram.

All water fittings are Victaulic type. It is possible to control an external pump by an on/off or 0-10V signal.

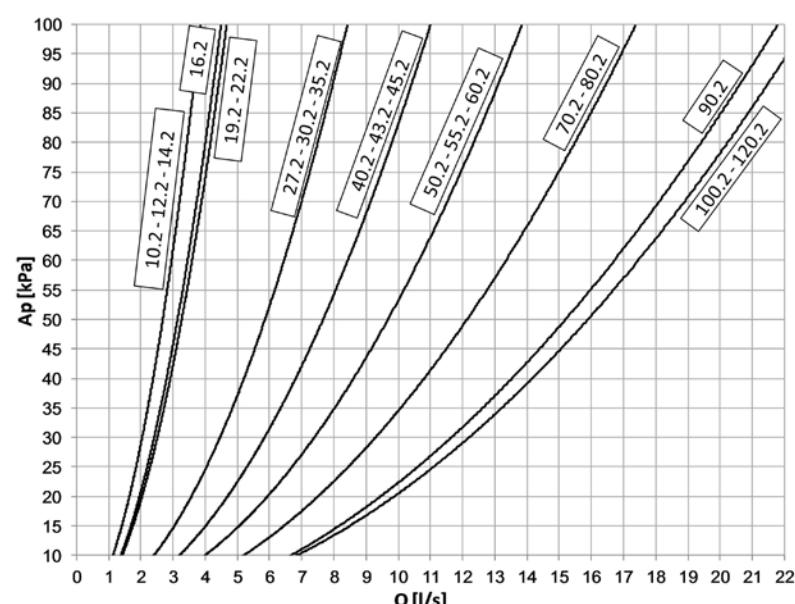

### User side exchanger pressure drop curves (2 pipe), cooling side exchanger (4 pipe)

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.  
 Q = Water flow rate [l/s]  
 DP = Pressure drops [kPa]

To the internal exchanger pressure drops must be added the pressure drops of the steel mesh mechanical filter that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as Clivet option (IFWX).

### Recovery side exchanger pressure drop curves (2 pipe), heatingt side exchanger (4 pipe)

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.  
 Q = Water flow rate [l/s]  
 DP = Pressure drops [kPa]

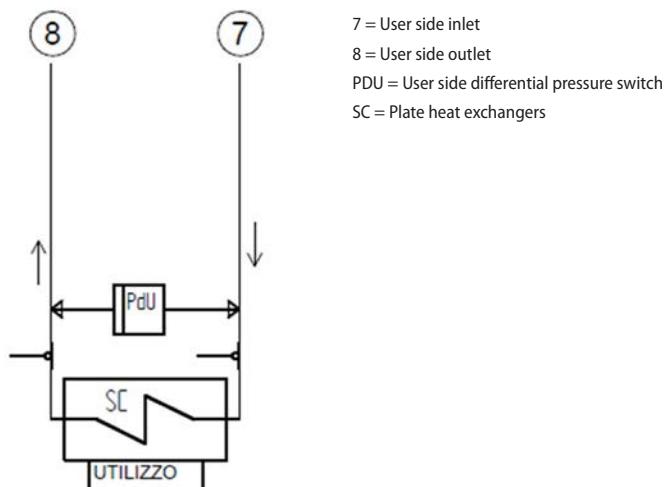

To the internal exchanger pressure drops must be added the pressure drops of the steel mesh mechanical filter that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as Clivet option (IFWX).

## Admissible water flow rates

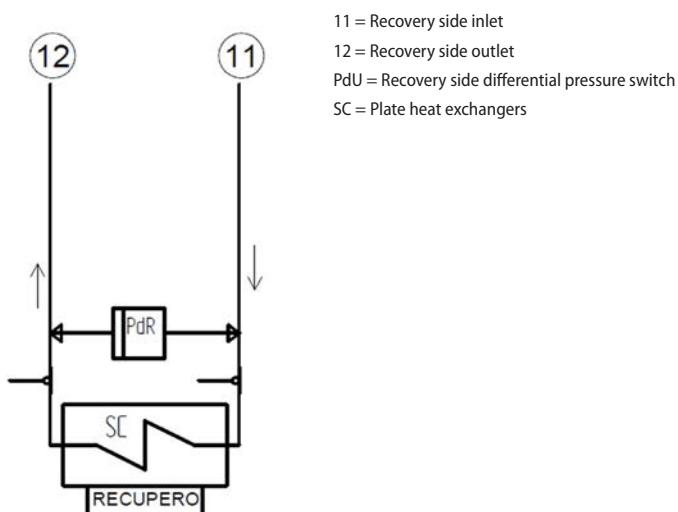

Admissible minimum (Qmin) and maximum (Qmax) water flow rates for the correct unit operation. They are referred to the unit in standard configuration without Clivet integrated hydronic assemblies user and/or recovery side.

SIZE		10.2	12.2	14.2	16.2	19.2	22.2	27.2	30.2	35.2	40.2	43.2	45.2	50.2	55.2	60.2	70.2	80.2	90.2	100.2	120.2

## Recovery side water diagram (2 pipe), heating side (4 pipe)

## User side and recovery side (2/4-pipe)

### Configuration: Units with VARYFLOW + (VARYU or VARYR or VARYU + VARYR)

Multiple hydronic configurations are available:

- VARYFLOW+ only user side (VARYU)
- VARYFLOW+ only recovery side (VARYR)
- VARYFLOW+ for the user side and recovery side(VARYU + VARYR)

The VARYFLOW+ option includes 2 centrifugal electric pumps arranged in parallel, and controlled by inverter, with housing and impeller made with AISI 304 stainless steel, and components as described on the water diagram key. All water fittings are Victaulic.

The electric pumps are equipped with three-phase electric motor with IP55-protection and complete with thermoformed insulated casing.

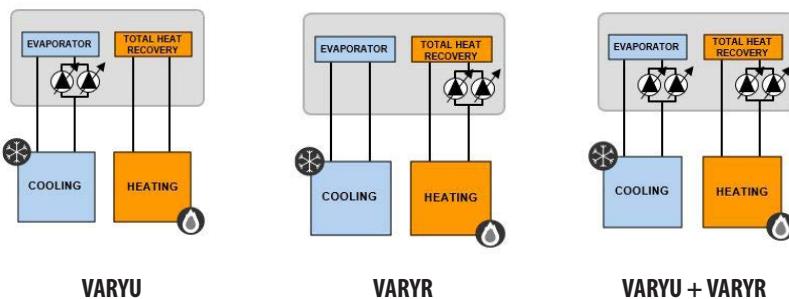

The control, modulates the water flow-rate keeping constant the delta T.

If the water temperature is in critical conditions, it allows to extend the unit operating ranges guaranteeing its operating, automatically reducing the water flow-rate. In the event of one of the two pumps is temporarily unavailable, it guarantees about the 80% of the nominal flow-rate.

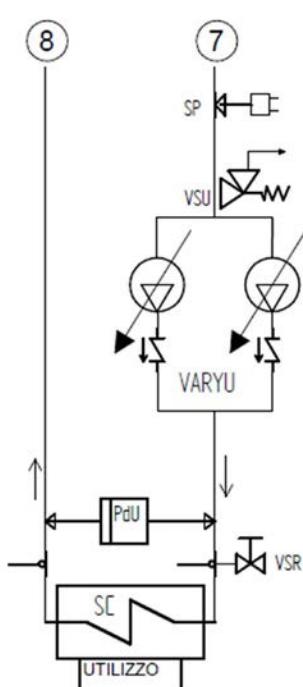

The available pressure and absorption graphs are the same for VARYFLOW+ on the user side and the recovery side.

Selecting the Varyflow+ hydronic assembly, the maximum and minimum flow rate limits vary as indicated in the following graphs according to the corresponding size.

The limits indicated in the admissible water flow rate table are larger and can be achieved with specific hydronic assemblies provided by the Customer.

**User side water diagram**

## Configuration: Unit with VARYFLOW+ (VARYU or VARYR or VARYU + VARYR)

### Available pressure (Size 10.2 - 12.2 - 14.2)

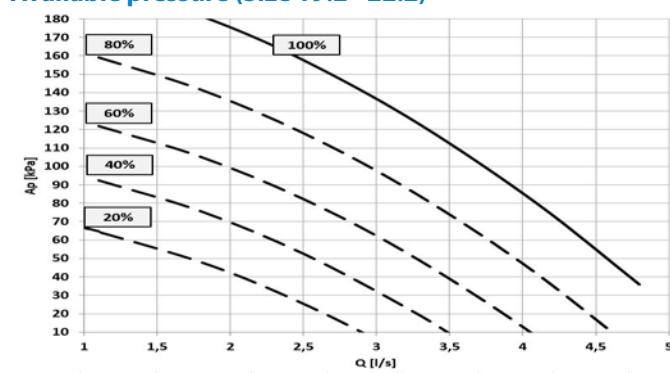

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 16.2)

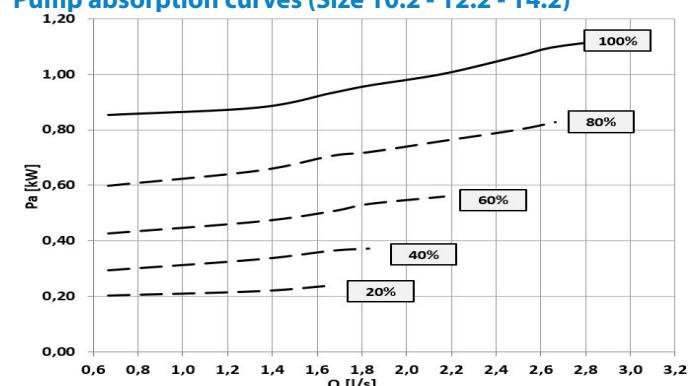

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 19.2 - 22.2)

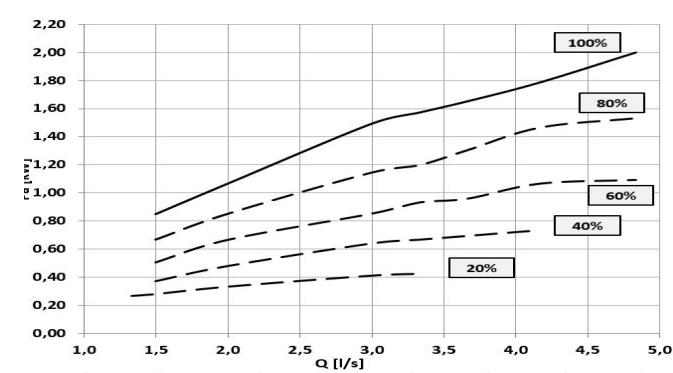

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 10.2 - 12.2 - 14.2)

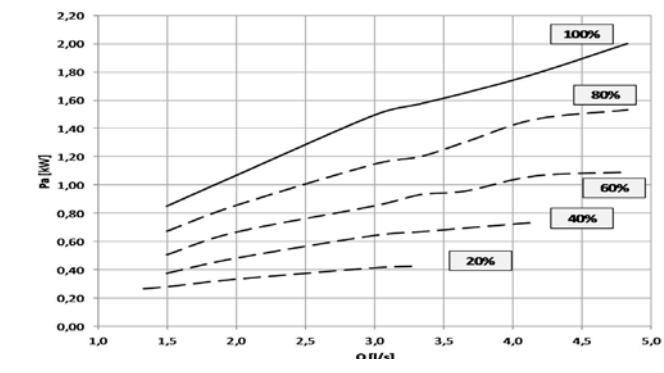

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

### Pump absorption curves (Size 16.2)

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

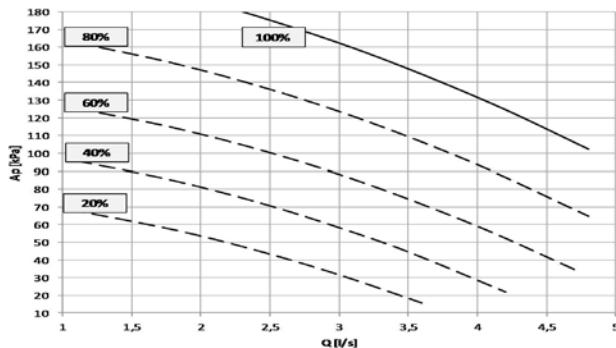

### Pump absorption curves (Size 19.2 - 22.2)

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

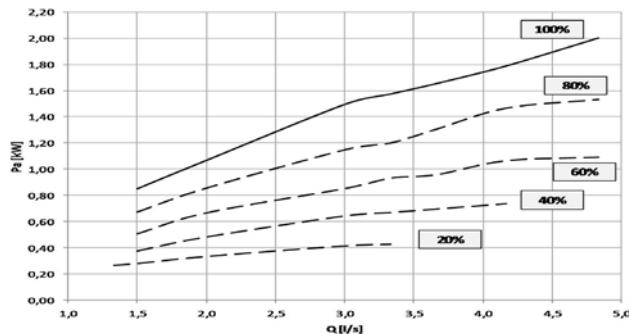

## Configuration: Unit with VARYFLOW+ (VARYU or VARYR or VARYU + VARYR)

### Available pressure (Size 27.2)

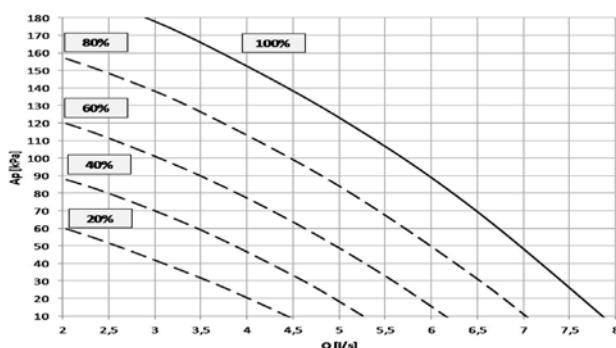

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 27.2)

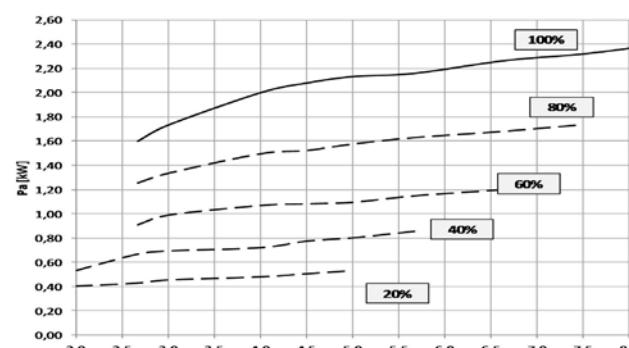

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

### Available pressure (Size 30.2 - 35.2)

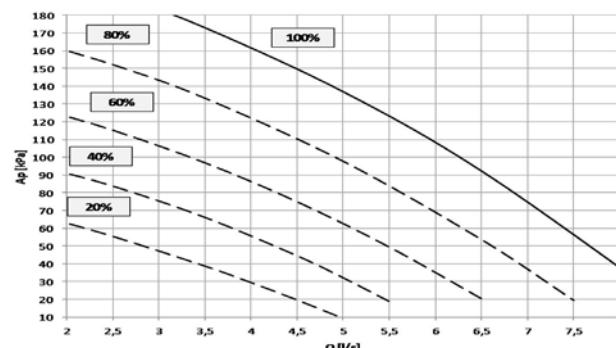

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 30.2 - 35.2)

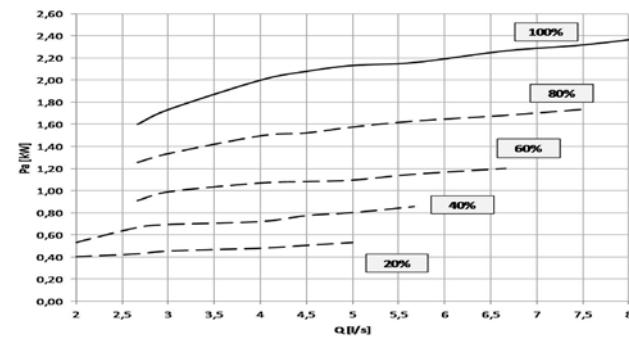

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

### Available pressure (Size 40.2)

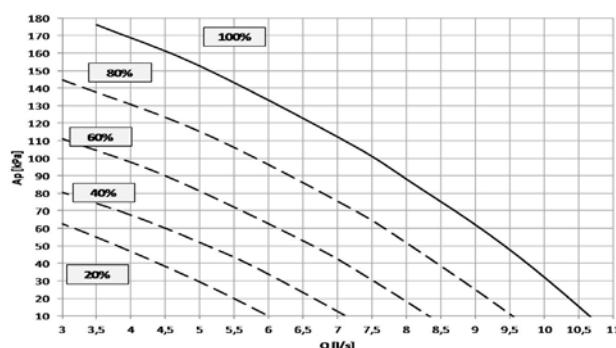

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 40.2)

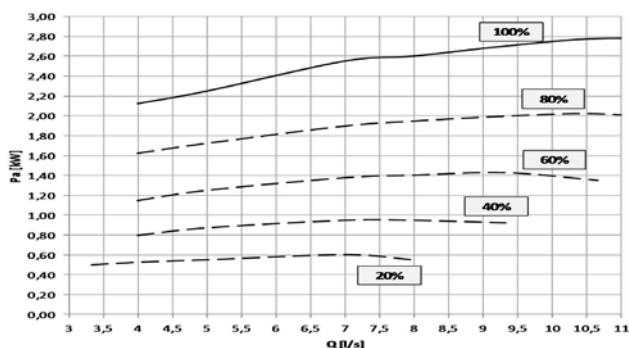

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

### Available pressure (Size 43.2 - 45.2)

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

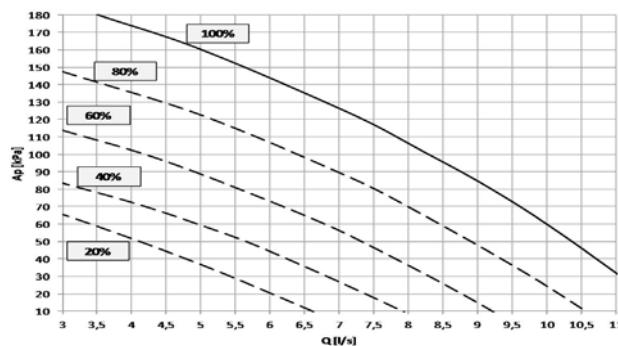

### Pump absorption curves (Size 43.2 - 45.2)

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

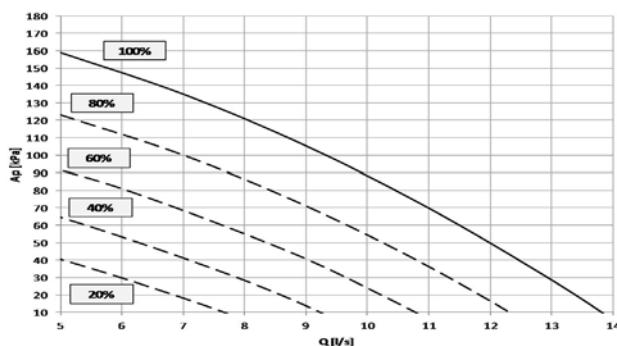

## Configuration: Unit with VARYFLOW+ (VARYU or VARYR or VARYU + VARYR)

### Available pressure (Size 50.2 - 55.2)

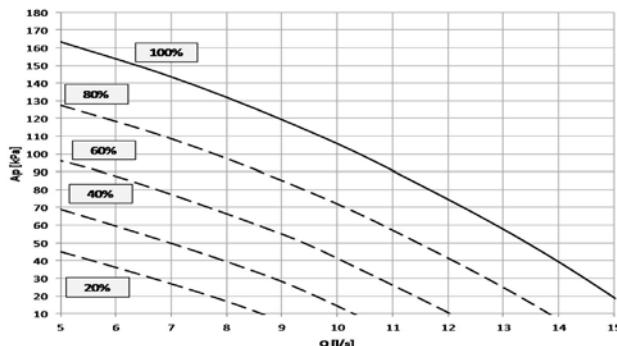

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 60.2)

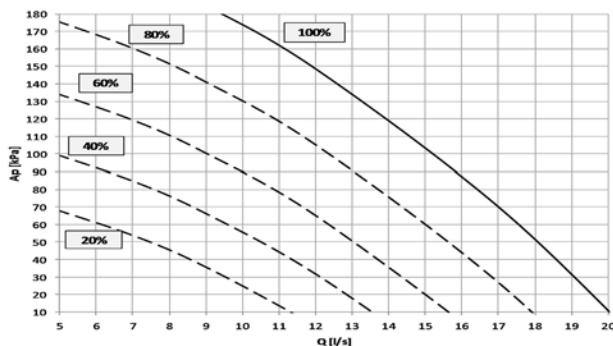

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 70.2 - 80.2)

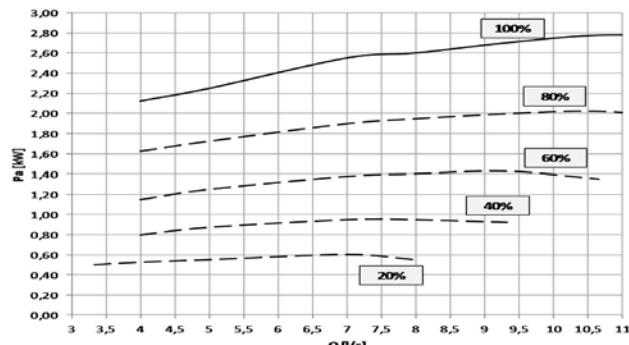

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 90.2)

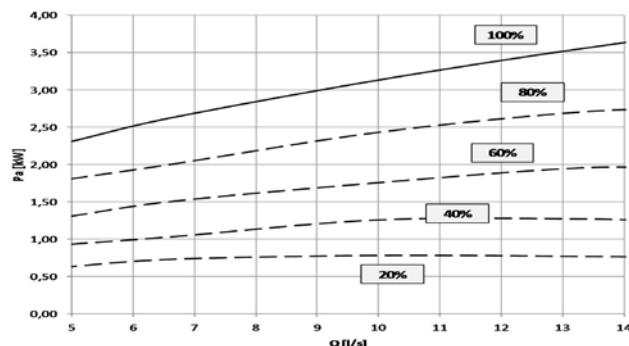

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 50.2 - 55.2)

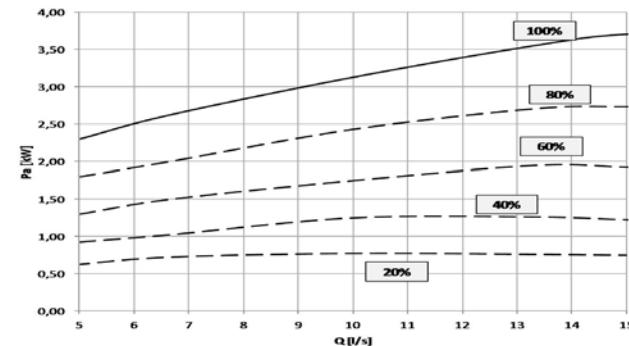

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

### Pump absorption curves (Size 60.2)

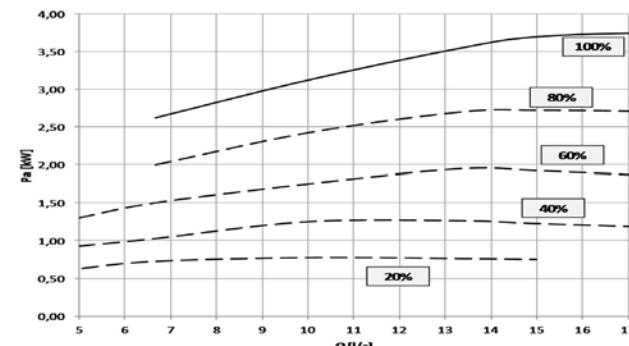

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

### Pump absorption curves (Size 70.2 - 80.2)

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

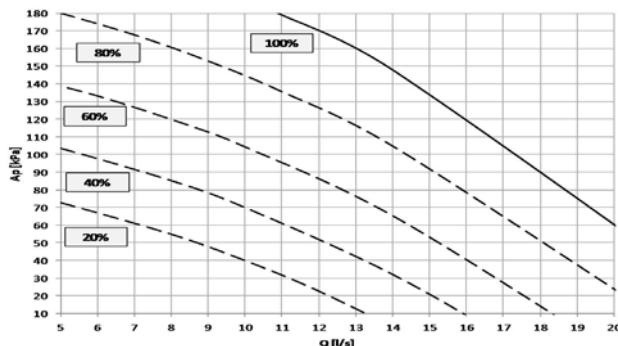

### Pump absorption curves (Size 90.2)

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

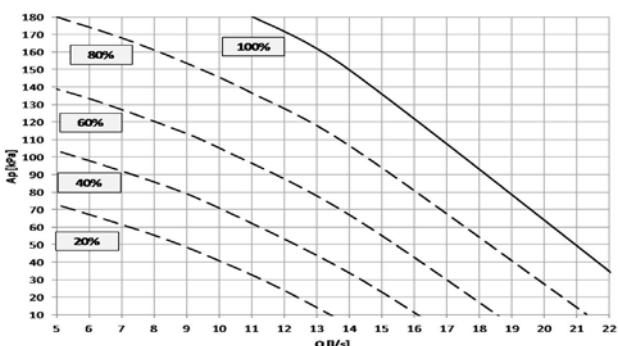

## Configuration: Unit with VARYFLOW+ (VARYU or VARYR or VARYU + VARYR)

### Available pressure (Size 100.2)

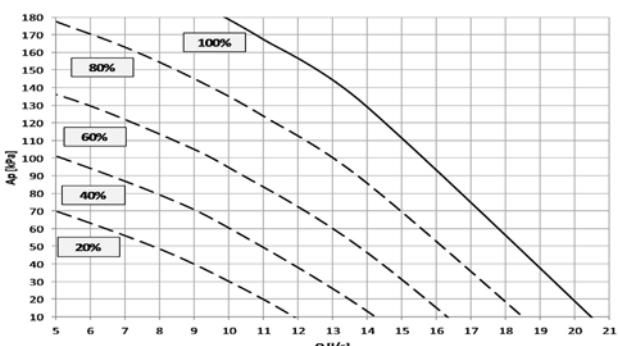

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 120.2)

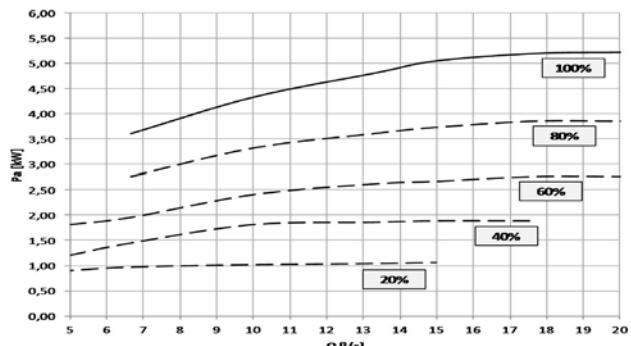

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Recovery available pressure (Size 100.2 - 120.2)

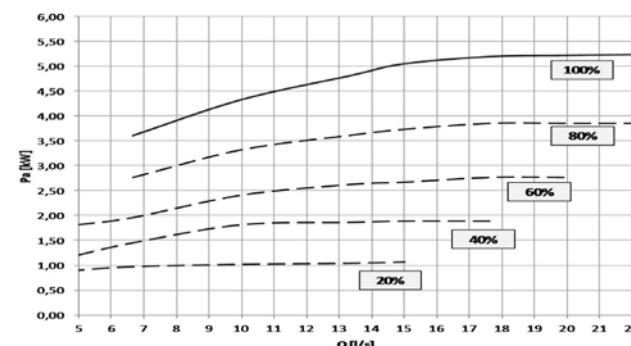

Q = Water flow rate [l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 100.2)

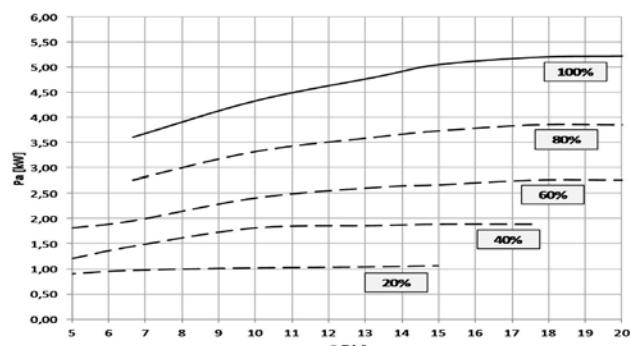

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

### Pump absorption curves (Size 120.2)

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

### Recovery pump absorption curves (Size 100.2 - 120.2)

Q = Water flow rate [l/s] Pa = Electrical power input [kW]

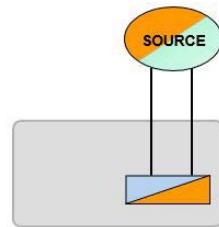

## Source side (2/4-pipe)

### Configuration: Standard unit (SVMS)

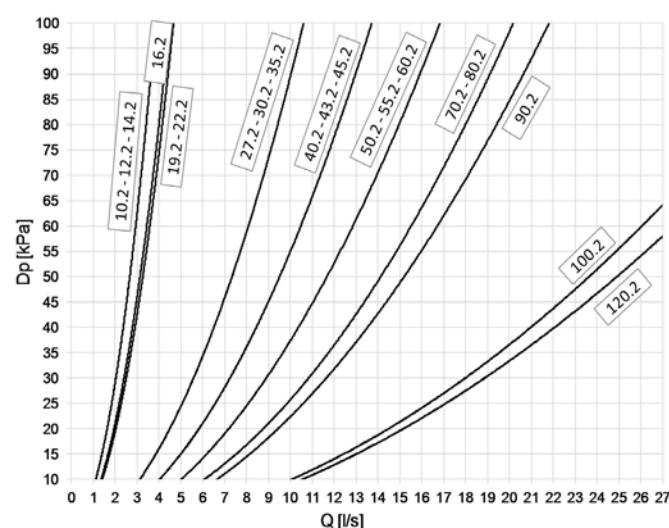

Configuration without hydronic assembly on the user side, but equipped with components as listed on the key of the enclosed plumbing circuit diagram.

All water fittings are Victaulic type. It is possible to control an external pump by an on/off or 0-10V signal.

To ensure correct operation of the unit, the customer must equip the system with a flow-rate control device on the source side and connect it to the unit.

### Source side exchanger pressure drop curves for groundwater applications

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.  
 Q = Water flow rate [l/s]  
 DP = Pressure drops [kPa]

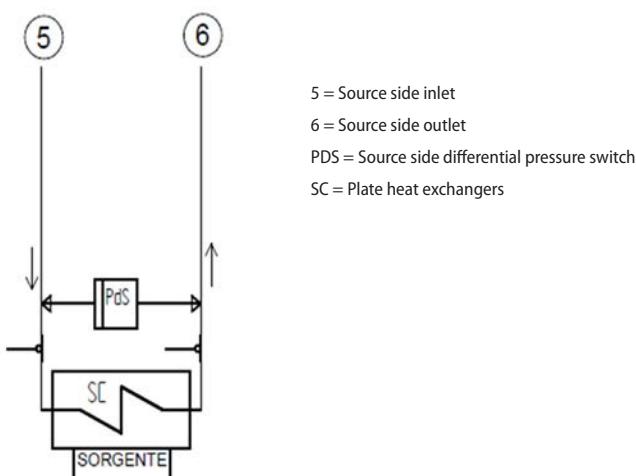

To the user side exchanger pressure drops must be added the pressure drops of the steel mesh mechanical filter that must be placed on the water input line. This device is essential to the unit's proper operation, and is available as accessory (IFWX).

### Admissible water flows for groundwater applications

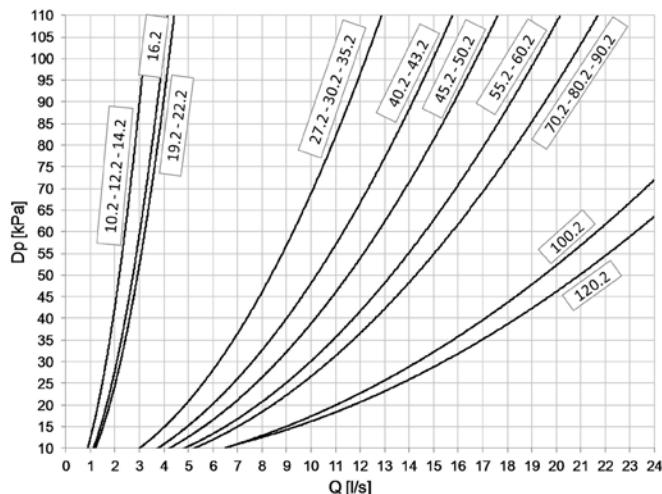

Admissible minimum (Qmin) and maximum (Qmax) water flow rates for a correct unit operation. They are referred to the unit in standard configuration without Clivet integrated hydronic assemblies source side

Size		10.2	12.2	14.2	16.2	19.2	22.2	27.2	30.2	35.2	40.2	43.2	45.2	50.2	55.2	60.2	70.2	80.2	90.2	100.2	120.2

### Available pressure (Size 55.2 - 60.2)

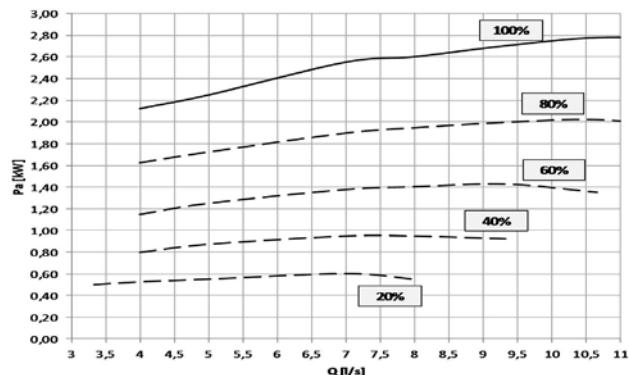

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Available pressure (Size 70.2 - 80.2)

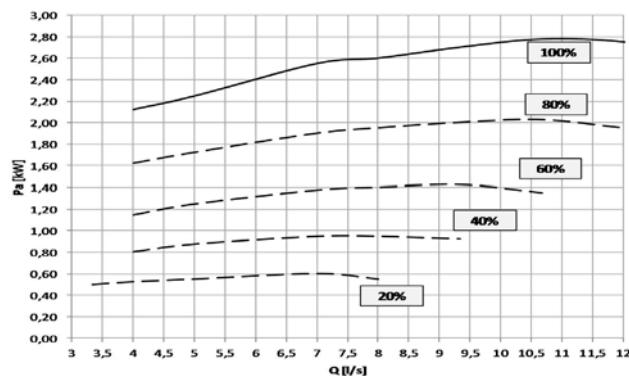

$Q$  = Water flow rate[l/s]  $Ap$  = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 40.2 - 43.2 - 45.2)

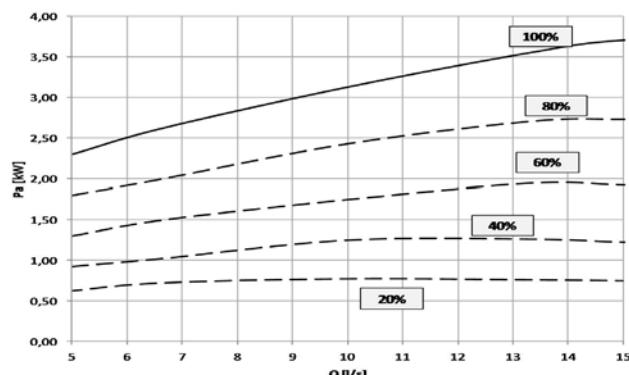

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

### Pump absorption curves (Size 50.2)

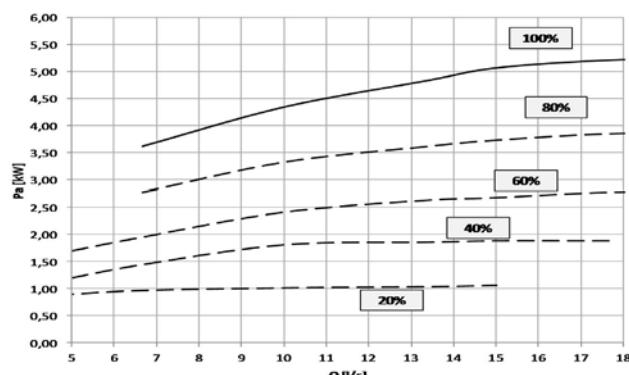

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

### Pump absorption curves (Size 55.2 - 60.2)

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

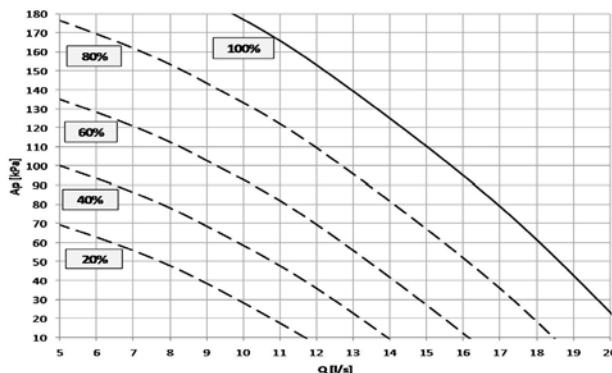

### Pump absorption curves (Size 70.2 - 80.2)

$Q$  = Water flow rate[l/s]  $Pa$  = Electrical power input [kW]

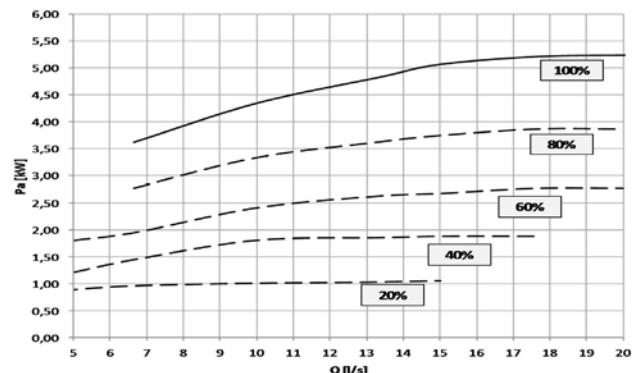

## Configuration: Unit with VARYFLOW + (VARYS)

### Available pressure (Size 90.2)

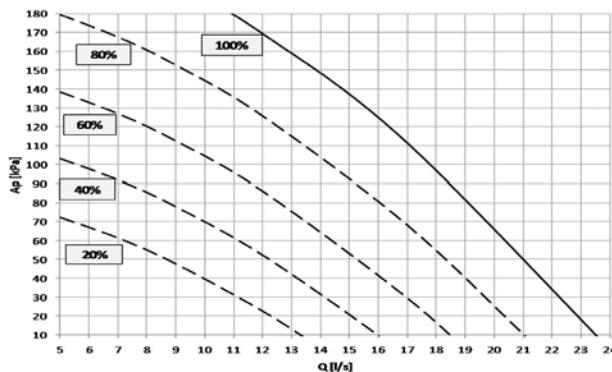

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 90.2)

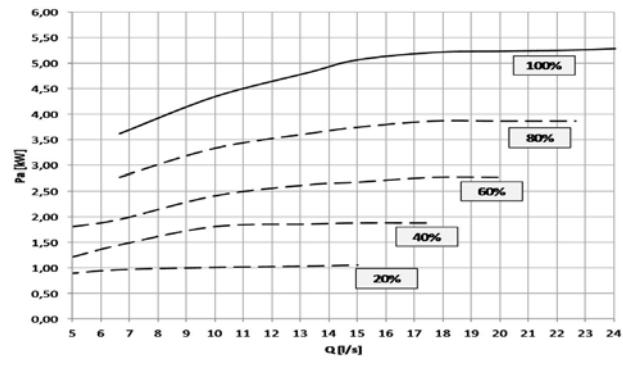

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

### Available pressure (Size 100.2)

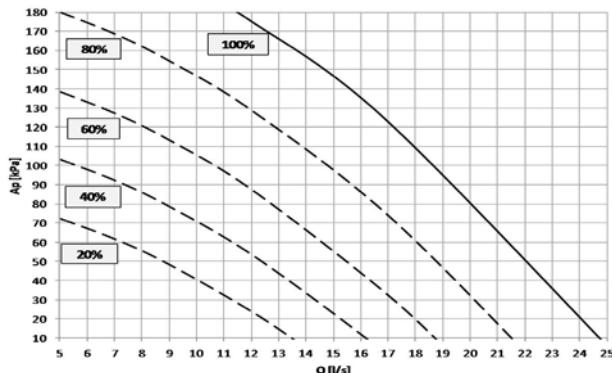

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 100.2)

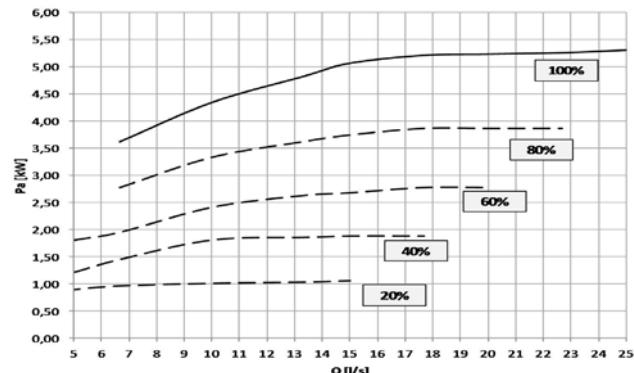

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

### Available pressure (Size 120.2)

Q = Water flow rate[l/s] Ap = Pressure head, available to the unit fittings [kPa]

### Pump absorption curves (Size 120.2)

Q = Water flow rate[l/s] Pa = Electrical power input [kW]

## Source side (2/4-pipe)

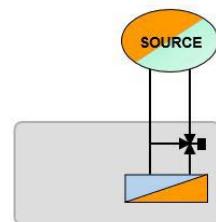

### Configuration: Unit with 3-way modulating valve (VS3M)

Configuration with one 3-way modulating valve on the source side and components as listed on the key of the enclosed plumbing circuit diagram. All water fittings are Victaulic.

The 3-way modulating valve connects the source side exchanger intake and output, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant.

The valve modulation is managed by a 0-10V signal generated by the unit electronic control.

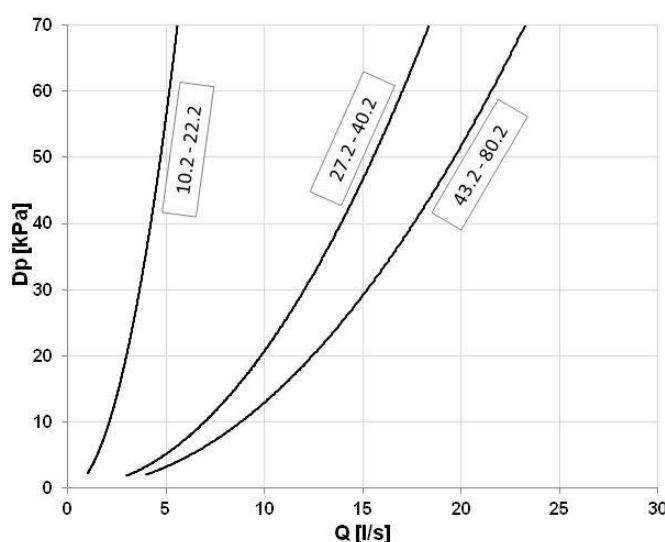

Option available only for the size from 10.2 to 80.2.

**⚠️** It is recommended not to exceed the pressure drops indicated in the graph to ensure a correct unit operation.

**⚠️** The limits indicated in the admissible water flow rate table are larger and can be achieved with specific modulating valves provided by the Customer.

#### Source side 3-way modulating valve pressure drops

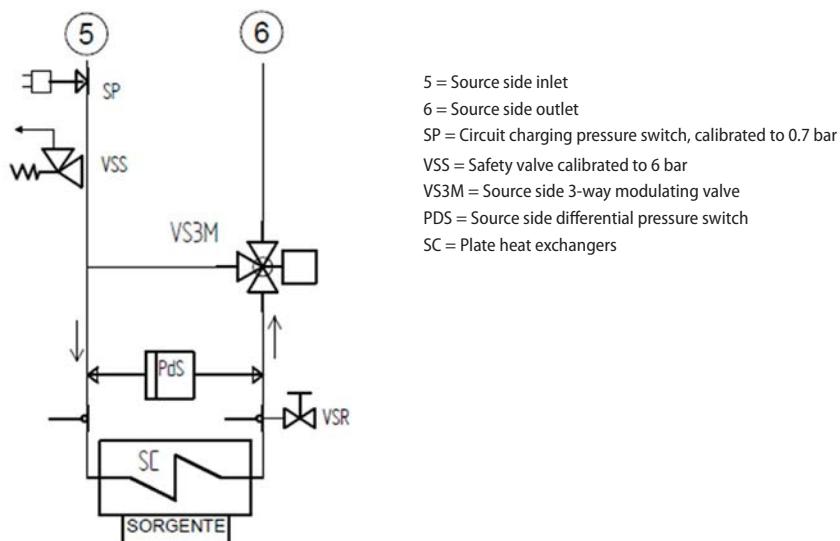

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]

DP = Pressure drops [kPa]

#### Source side water diagram

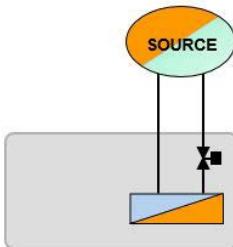

## Source side (2/4-pipe)

### Configuration: Unit with 2-way modulating valve (VS2M)

Configuration with one 2-way modulating valve on the source side and components as listed on the key of the enclosed plumbing circuit diagram. All water fittings are Victaulic.

The 2-way modulating valve, installed on the source side exchanger intake, modulates the water flow-rate through a 0-10V signal emitted from the unit's controller.

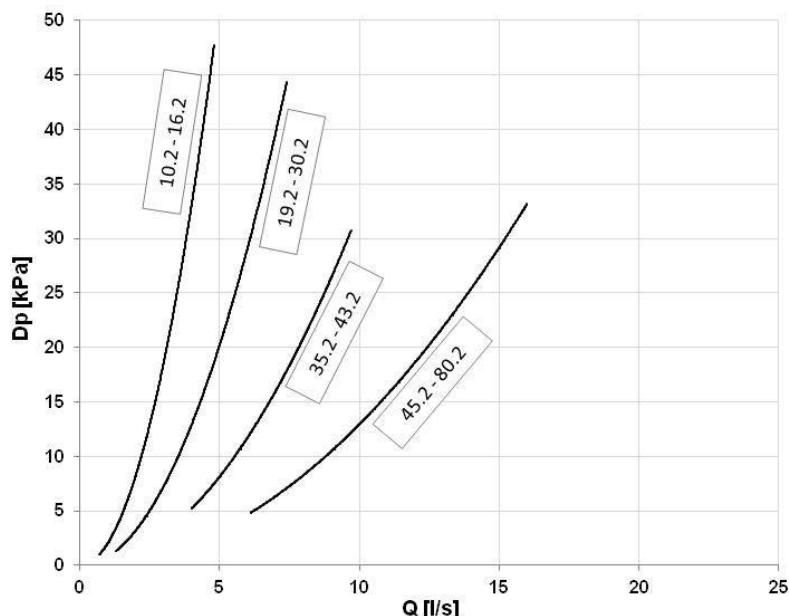

Option available only for the size from 10.2 to 80.2.

It is recommended not to exceed the pressure drops indicated in the graph to ensure a correct unit operation.

The limits indicated in the admissible water flow rate table are larger and can be achieved with specific modulating valves provided by the Customer.

#### Source side 2-way modulating valve pressure drops

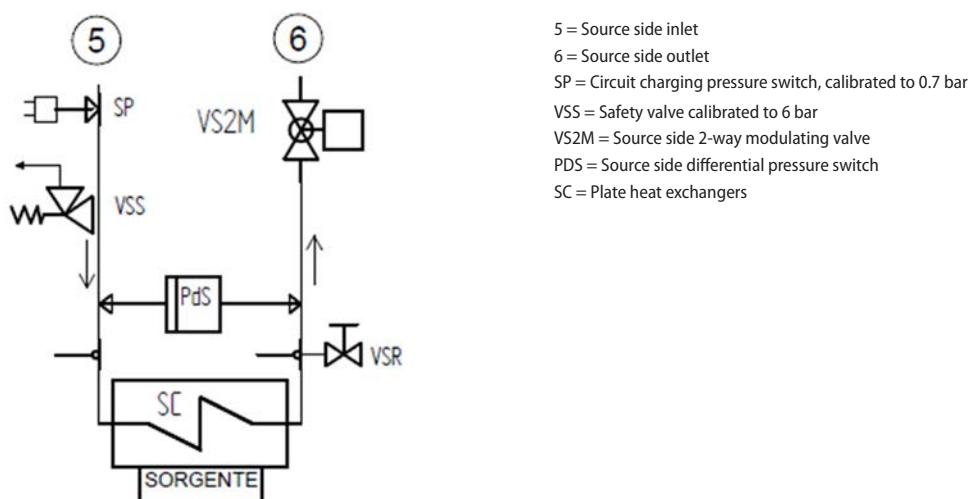

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow rate [l/s]

DP = Pressure drops [kPa]

#### Source side water diagram

## Built-in configuration options

### PFCP - Power factor correction capacitors (cosfi > 0.9)

The component is necessary to lower the phase difference between current and voltage in the electromagnetic components of the unit (e.g. asynchronous motors). The component allows to put the cosfi power factor to values on average higher than 0.9, reducing the network reactive power. This often leads to an economic benefit which the energy provider grants to the final user.

### SFSTR - Disposal for inrush current reduction

Electronic device that automatically and gradually starts the compressors, thereby reducing the current peak generated in star-triangle start-ups and therefore reduces the mechanical stress on the motor and the electrodynamic stress on the power cables and on the mains.

Option available only for the size from 10.2 to 80.2.

 For size from 90.2 to 120.2 the starting current check is standard. The function is guaranteed by the presence in the motor of the compressor of larger size of a double winding. This solution allows to start the compressor in two stages, obtaining two peaks of reduced current, spaced apart from one another.

### MF2 - Multi-function phase monitor

The multifunction phase monitor controls all phases and their sequence, checks for voltage anomalies (+/-10%), and automatically restores operation of the unit as soon as the power supply returns to normal.

This control allows to:

- salvaguardare i componenti interni dell'unità, che essendo alimentati da una tensione anomala potrebbero funzionare in modo non corretto o rompersi;
- quickly identify, among the alarms of the unit's components, the real cause of the malfunction due to the sudden change in voltage.

### SDV - Cutoff valve on compressor supply and return

The presence of supply and intake cutoff valves enables the compressors to be isolated and substituted without discharging the refrigerant from within the refrigeration circuit. This means that the extraordinary maintenance activities are facilitated.

Option available only for the size from 10.2 to 80.2.

### CMSC8 - Serial communication module to BACnet supervisor

Allows the serial connection to supervision systems, by using BACnet as communication protocol. It allows the access to the entire list of operation variables, controls and alarms. With this accessory, every unit can communicate with the main supervision systems.

The device is installed and wired built-in the unit.

 The configuration and management activities for the BACnet networks are the responsibility of the client.

 The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

### CMSC9 - Serial communication module to Modbus supervisor

This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

The device is installed and wired built-in the unit.

 The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

### CMSC10 - Serial communication module to LonWorks supervisor

This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard.

The device is installed and wired built-in the unit.

 The configuration and management activities for the LonWorks networks are the responsibility of the client.

 LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.

## Accessories separately supplied

### RCTX - Remote control

This option allows to have full control over all the unit functions from a remote position.

It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit.

- All device functions can be repeated with a normal portable PC connected to the unit with an Ethernet cable and equipped with an internet navigation browser.
- The device should be installed on the wall using suitable plugs, electrically hooked up and connected to the unit (installation and wiring are the responsibility of the Customer). Max. remote distance 350 m without auxiliary supply.
- Data and power supply serial connection cable n.1 twisted and shielded pair. Diameter of the individual conductor 0.8 mm.

### BACX - BACnet serial communication module

Allows the serial connection to supervision systems by using BACnet-IP as a communication protocol. It allows the access to the entire list of operating variables, controls and alarms. With this accessory every unit can communicate with the main supervision systems.

- The configuration and management activities for the BACnet networks are the responsibility of the client.
- The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

### CMMBX - Serial communication module to supervisor (MODBUS)

This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

- The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

### CMSLWX - LonWorks serial communication module

This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard.

- The configuration and management activities for the LonWorks networks are the responsibility of the client.
- LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.

### VS2MX - Source side 2-way modulating valve

The 2-way source side modulating valve, installed on the source side exchanger intake, modulates the flow of water in response to a 0-10 V signal from the unit's controller.

### SPCX - Set-point compensation with outdoor air temperature probe

The setpoint compensation with air probe changes the calibration of the setpoint in relation to the temperature of the outside air and this reduces energy costs. The probe is connected to the unit's main control module and the maximum length of the connection cable is 20 meters. The sensor must not be influenced by factors that might affect its reading (for instance direct sunlight, contact with external heat sources, etc.) and therefore must be placed in a sheltered place.

## VS2MX - Source side 2-way modulating valve

The 2-way source side modulating valve, installed on the source side exchanger intake, modulates the flow of water in response to a 0-10 V signal from the unit's controller.

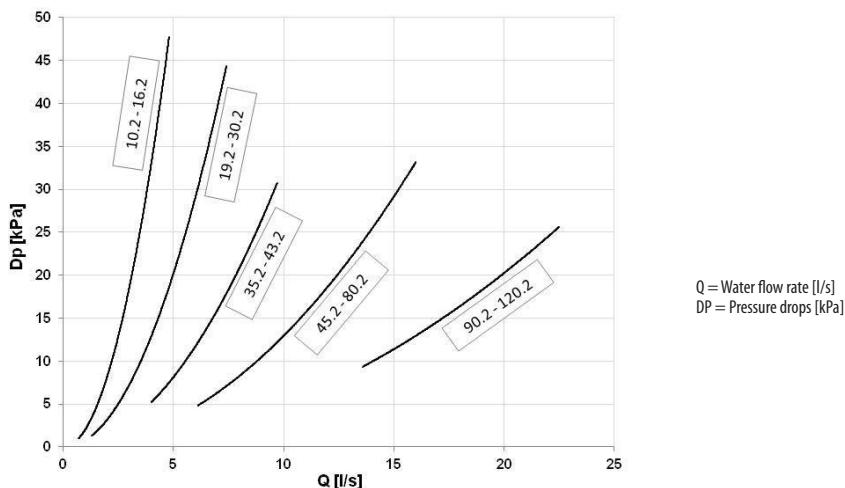

It is recommended not to exceed the pressure drops indicated in the graph to ensure a correct unit operation.

The limits indicated in the admissible water flow rate table are larger and can be achieved with specific modulating valves provided by the Customer.

### 2-way modulating valve pressure drops

## VS3MX - Source side 3-way modulating valve

The 3-way modulating valve connects the source side exchanger inlet and output, thus bypassing the exchanger and reducing the flow of water inside it, while keeping the machine's delivery flow constant.

The valve modulation is managed by a 0-10V signal generated by the unit electronic control.

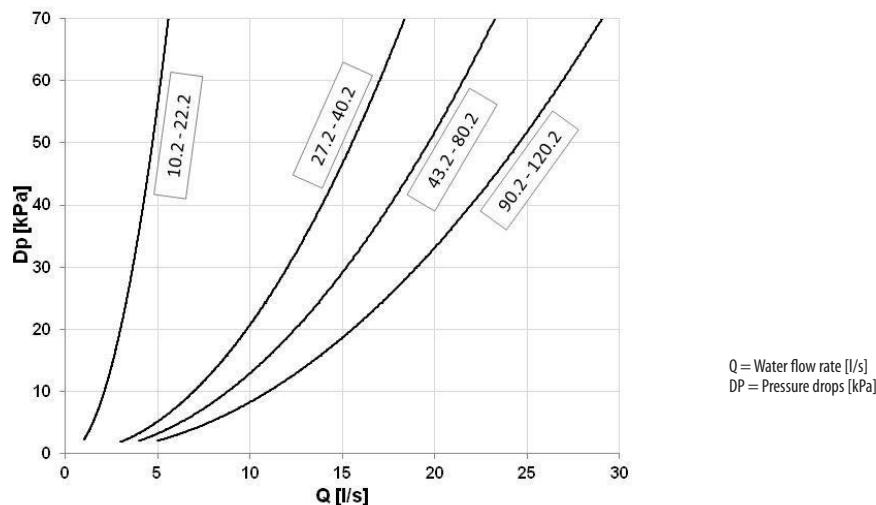

It is recommended not to exceed the pressure drops indicated in the graph to ensure a correct unit operation.

The limits indicated in the admissible water flow rate table are larger and can be achieved with specific modulating valves provided by the Customer.

### 3-way modulating valve pressure drops

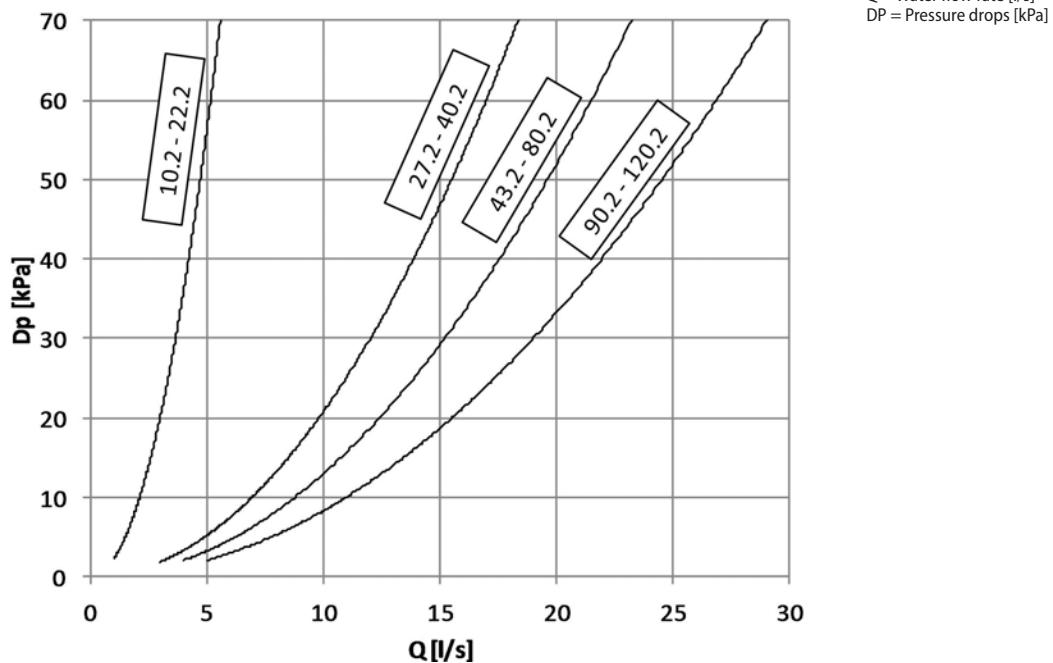

## AVIBX - Anti-vibration mount supports

The rubber antivibration mounts are attached in special housing on the support frame and serve to smooth the vibrations produced by the unit thus reducing the noise transmitted to the support structure.

## VACSRX - Total recovery side DHW switching valve

The domestic hot water switching valve on the recovery side is also supplied as a separate accessory.

### DHW switching valve pressure drops

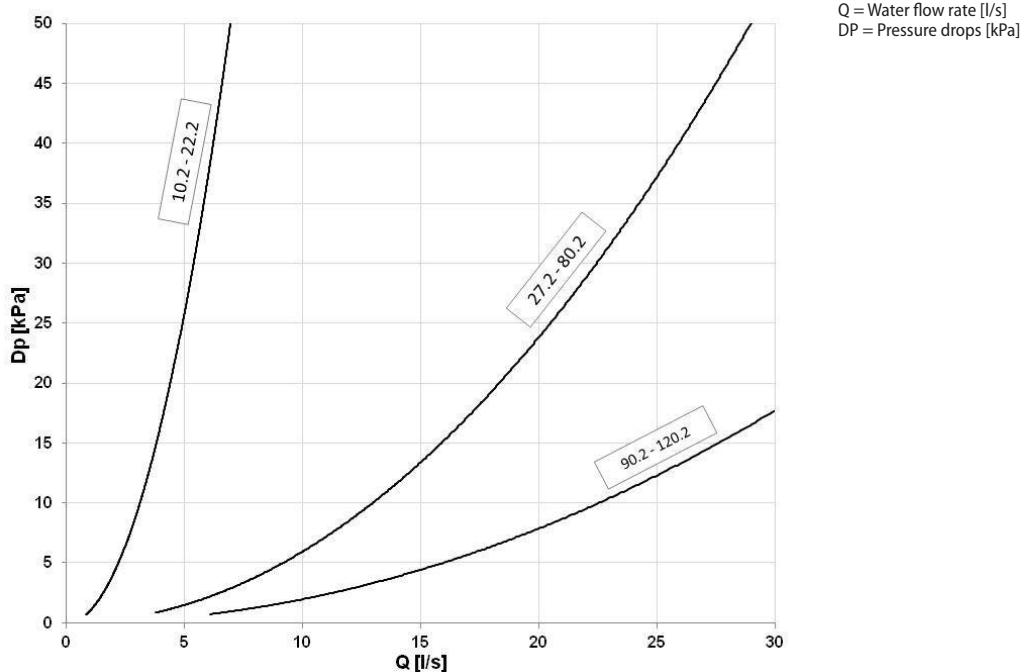

## IFWX - Steel mesh strainer on the water side

The device prevents any impurity in the water circuit from soiling the exchanger. The stainless steel mesh mechanical strainer must be placed on the water inlet line. It needs to be easy to remove for periodical maintenance and cleaning operations. It can be used on the utility, source and recovery side.

Check for the presence of the required hydraulic shut-off valves in the system, in order to undertake periodical maintenance.

### Pressure drops of steel mesh strainer water side

# Configuration for 2-pipe system and 4-pipe system

kWf = Cooling capacity in kW

kWe = total power input(kW)

To = Water outlet temperature user side (°C)

EER = Ratio between delivered cooling capacity and power input

Unit configuration for system with 2 pipes: cooling performances relative to the user side

Unit configuration for system with 4 pipes: cooling performances relative to the user side

non-glycolic source side

# Configuration for 2-pipe system and 4-pipe system

kWt = Heating capacity (kW)

kWe = total power input(kW)

To = Water outlet temperature user side (°C)

COP = Ratio between delivered heating capacity and power input

Unit configurations for system with 2 pipes: heating performances relative to the user side or recovery side without cooling request

Unit configurations for system with 4 pipes: heating performances relative to the recovery side without cooling request

## Configuration for 2-pipe system and 4-pipe system Groundwater version

**Cooling 0% - Heating 100% - Size 43.2 - 120.2**

kWt = Heating capacity (kW)

kWe = total power input(kW)

kWf = Cooling capacity in kW

GLE = Overall efficiency

Tw = Recovery side water outlet temperature (hot)

# Configuration for 2-pipe system and 4-pipe system

## Geothermal and Groundwater application

Cooling 100% - Heating 100% - Size 35.2 - 70.2

Size	Tw	User side water outlet temperature (cold)
