

ELFODuct

Uncased horizontal water terminal unit

Range: CF 91 - 242

Capacities from 29,70 to 83,8 kW

The ELFODuct CF units are ideal air-treatment terminal units for installations where ducted air distribution is necessary.

They are designed for installation in suspended ceilings and are distinguished by their compactness and extremely low noise levels obtained thanks to both internal and external insulation.

The main features are:

- various available controls, from simple speed control through to the electronic control set-up for connection to ELFOControl. or general supervisors;
- available in version for 2 and 4-pipe systems;
- wide choice of aeraulic accessories (plenum for round ducts, fresh air intake plenum);
- electric heater section with different power plus electronic power modulation control;
- high head-pressure fans for ducted air distribution.

STANDARD UNIT SPECIFICATIONS

STRUCTURE

(SIZE 91-121) Hot galvanized steel cabinet with galvanized and painted plate panelling, as per the MAGONA 3000/80 system. Internal layer of open cell polyurethane lining.
(SIZES 142-162-182-202-242) Self supporting panel structure in steel sheet protected by oven-dried polyester paint. The panels are easy to remove for complete accessibility to the internal components and are internally coated with a thermo-acoustic insulation. The unit is furnished with condensate tray .

INTERNAL EXCHANGER

finned exchanger, made from copper pipes arranged in staggered rows and mechanically expanded for better adherence to the collar of the fins. The fins are made from aluminium with a special corrugated surface, set a suitable distance apart to ensure maximum heat exchange efficiency.

FAN

dual intake centrifugal fan coupled via belt/pulley system to a three-phase electric motor on belt tightener. Variable-pitch pulley. The fan/motor assembly is mounted on an antivibration system.

TRAY

Galvanized steel condensate collection tray fitted with drain pipe.

ELECTRICAL PANEL

Electrical panel composed with terminal block and isolator IP55.

ELECTRIC MOTOR

Electrical motor connected to fan by belt/pulley system.

CONNECTIONS

1"¼ water coil connections

ACCESSORIES

- 2 rows hot water coil
- 3 rows hot water coil (SIZE 91-121)
- Electric heaters.
- Larger outlet electric fan motor
- Double-speed motor
- Angular air filter section
- Mixing and recycling box
- RS485 remote communication serial port
- CLIVET TALK TERMINAL electronic for HID-T2 or HID-T3 thermostats(ELFOControl)
- HID-T2 electronic ambient control
- HID-T3 electronic ambient control
- Rubber antivibration mounts
- 3 way valve kit for 2-pipe system
- 3 way valve kit for 4-pipe system

Configurations

Necessary configuration string for supplying the unit with the indicated elements.

UNIT CONFIGURATIONS

(1) VOLTAGE

Supply voltage 400/3/50 without neutral(400T)
Standard power supply

(2) WATER FITTINGS

Water fittings to the left(SX)
standard
Water fittings to the right(DX)
(sizes 142-162-182-202-242)

(3) AIR FLOW

Standard air outlet flow-rate(SM)
Reduced air outlet flow-rate(RM)

(4) MOTOR SPECIFICATIONS

Standard motor(MOS)
Double-speed motor(MOD)

(5) WATER COIL

Standard water coil(CWS)

(6) AIR FILTER

Air filter: not required(-)
standard
Angular air filter section.(FCS)

(7) HOT WATER COIL

Hot water coil: not required(-)
standard
2 rows hot water coil(CHW2)
3 rows hot water coil(CHW3)
(size 91-121)

(8) PREHEATING ELECTRIC HEATERS

Heating electric heaters: not required(-)
standard
4,5 kW electric heaters(EH09)
(size 91-121)
6 kW electric heaters(EH10)
(size 91-121)
9 kW electric heaters(EH12)
(size 91-121)
12 kW electric heaters(EH14)
(size 91-121)
18 kW electric heaters(EH17)
24 kW electric heaters(EH20)
(sizes 142-162-182-202-242)

(9) ELECTRICAL PANEL

Electric version: not required(-)
standard
Capacity electrical panel(CQEP)
CLIVET TALK TERMINAL electronic for HID-T2 or HID-T3 thermostats
(ELFOControl)(CTS)

(10) REMOTE COMMUNICATION SERIAL PORT

Remote communication serial port: not required(-)
standard
RS485 remote communication serial port(SP1)

242	70,2	71,2	72,8	74,7	74,6	74,5	71,8	66,9	72,2	80,2

The sound levels refer to units ceiling installed without false ceiling, with nominal air flow, fan supply 400/3/50, damper on the fan discharge and 1 m. of ducting suction and discharge. Sound pressure levels referred to 1 m. from units external surface operating in free field conditions.

When the unit is installed in conditions different from nominal test conditions (e.g. near walls or obstacles in general or with different static pressures), the sound levels may undergo substantial variations (up to a maximum of 3dB (A) of deviation). Data provided according to UNI EN ISO 9614-2 Regulation.

Standard water coil

internal exchanger pressure drop

Cooling operation

Q = WATER FLOW
DP = PRESSURE DROP

Standard water coil

internal exchanger pressure drop

Heating operation

Q = WATER FLOW
DP = PRESSURE DROP

Correction factors for reduced air flow-rate

The reduced flow-rate (around 15% less than the rated value) causes a variation in the output of the unit. Therefore, all capacities (cooling kWf, sensible kW and heating kWt capacity) should be corrected using the factors shown in the table to the side.
The correction factors for the individual terminal should be considered at parity of evaporation temperature (cooling) and condensing temperature (heating).

OUTLET WATER FITTINGS

(sizes 142-162-182-202-242)

The manifold outlet side of the coil is determined in the configuration phase, but if necessary it can be changed at the worksite prior to installation of the unit by removing the access panels and turning the coil.

The performance of the fans does not include the pressure drop in the air filter section (optional).

MMF - Outlet uprated electric motor

The uprated electrical motor of supply fan is used when the standard motor capacity is not sufficient to reach extremely high values of external static pressure. The standard electric motor is described in the general technical data, while the "DELIVERY FAN PERFORMANCE" section provides information about the uprated motors, on the basis of the useful static pressure.

The performance of the fans does not include the pressure drop in the air filter section (optional).

ACCESSORIES

CHW2 - 2 rows hot water coil

(size 91-121)

(BHW3)3 rows water coil

(size 91-121)

This section is required if the environment is not heated using a unit in heat pump mode. In fact, in harsh winter climates, the outside air temperature may fall below the minimum operating limit of the unit, or be such as to cause an excessive decline in performance, making the installation of heat pump units unadvisable. The 2- or 3-row hot water coil is housed in a special compartment inside the unit, and is installed as an alternative to the electric heater coil. The hot water coil can also be supplied separately and installed in the unit at a later time. This section is made from a galvanised plate frame, copper pipe coil and aluminium fins.

BHW2 - 2 rows water coil

(sizes 142-162-182-202-242)

This section is necessary if the ambient cannot be suitably heated with a heat pump unit. Indeed, under a very harsh winter climate, the external air temperature can go below the min. operating limit of the unit or cause excessive poor performance, thus advising against the installation of heat pump units.

The hot water coil is seated in a suitable compartment inside the unit, as an alternative to the electric heating coil.

This section is made up of a galvanized plate frame, a coil in copper pipes and aluminum fins.

EH - Electric heaters

(size 91-121)

If hot water is not available, the electric heater section can be used for the utilities described above.

This is supplied with a thermal-magnetic power cut-out, safety thermostat against overheating, and an electronic board for the modulating control of the power, from 0 to 100%, with a trimmer for limiting the maximum power supplied, and/or ON/OFF control.

It is made with a galvanised plate frame and finned aluminium heating elements that allow rapid and uniform diffusion of the heat.

For the power values available, refer to the table enclosed further on.

The air-side pressure drop according to the capacity can vary from a minimum of 5 Pa to a maximum of 10 Pa.

N.B. This section requires a 400/3/50 Hz +/- 10% power supply.

- (3) AIR FLOW

(sizes 142-162-182-202-242)

If there is no possibility of using the hot water coil, the section with electric heaters can be used. It is supplied with a power magneto-thermal switch and a safety thermostat against superheating. It is made up of a galvanized plate frame and the heating elements are made up of steel pipes and galvanized fins for a homogeneous heat distribution.

10V2X - 3 way valve kit for 2-pipe system

10V4X - 3 way valve kit for 4-pipe system

The option has to be combined to the water coil for 2 or 4-pipe system and it allows the automatic control of the unit power efficiency. The kit includes the 3-way valve body, modulating actuator with cable to be connected to the unit logic, T pipe fittings. The installation has to be carried out on site outside the unit, also the by-pass pipe has to be selected by the Customer.

The kit is combined to option: CTS CLIVET TALK TERMINAL electronic for HID-T2 or HID-T3 thermostats

Installation provided by the Customer.

Separately supplied accessories

FCS - Angular air filter section

(size 91-121)

Pre-painted metal plate frame. Filtering media made from sized polyester fibre with synthetic resins, self-extinguishing (class F1-DIN 53438), washable in soapy water, max. temperature 60°C.

Max. degree of separation 87.5 % (ASHRAE 52-76 Atm),

Eurovent classification 4/5 EU 3. The filtering media is contained in a galvanised plate frame with electric welded galvanised protective mesh.

MCRX - Mixing and recirculating chamber

(size 91-121)

When the system needs fresh air flow, this section allows the connections of return air from the ambient duct with the intake fresh air duct.

The renewal air regulation is obtained by a coupled air lock, eventually motorized. The section divided the nominal air flow in 1/3 of outdoor air inlet and 2/3 of ambient air recirculation.

The plenum is suitable to be installed with fresh air intake on both sides (right and left) rotating it of 180° before the coupling with the base unit the regulating handle is an optional supplied on the indoor air inlet side. On the opposite side a bolt suitable for servo-control is supplied.

Separately supplied accessories

AMRX - Rubber antivibration mounts

The antivibration mounts are installed at the base of the unit to reduce its vibrations in case of floor positioning.

Separately supplied accessories

MOD - Double-speed motor

The two-speed motor is managed by a manual selector (to be provided for by the client) for the adjustment of the air flow rate of the fan. The double speed is normally used when there are air ducts made of fabric. During the start-up phase, the first speed prevents tears in the fabric ducts. After that, with the second speed the system comes up to normal operating capacity.

Configuration Detail

CQEP- Capacity electrical panel

The electrical panel is composed of:

- motor protection switch
- remote switch for power supply of centrifugal fan
- terminal board for connection to motor

Configuration Detail

CTS - CLIVET TALK TERMINAL electronic for HID-T2 or HID-T3 thermostats (ELFOControl)

This is a card for control of the unit which, in addition to basic functions, allows it to be connected to a network of similar units managed centrally by ELFOControl, which in turn can be connected to a supervisor, moreover it can also manage a linked mini-net, of maximum 8 units, by RS485 or Wireless serial ports, with a Master-Slave system.

This type of electronic card is suited for communicating via RS485 or wireless if connected to SP1 or SPZB devices.

The microprocessor control installed in the unit receives operating settings from one of the following devices:

- HID-T2 - room control for wall installation
- HID-T3 - room control for wall installation with humidity probe
- ELFOControl

Its functions are:

- control of minimum temperature of system water temperature
- control of ON-OFF water valve
- digital input for remote on/off function or winter/summer
- control of actuator of external air shutter
- on/off control of electrical heating element or cumulative alarm relay.

The room temperature probe includes the ClivetTalkTerminalSpace electronics.

Configuration Detail

HID-T2 - HID-T2 electronic ambient control

The HID-T2 room thermostat makes it possible to interface with the regulation module of units equipped with ClivetTalkTerminal Space electronics and to manage one or more thermostat units.

The room thermostat allows the following functions:

- Setting of desired temperature
- On/off
- Change Summer/winter automatically or manually with digital input
- Selection of economic operation
- Setting of unit operation parameters
- Setting of fan-only mode
- Control of external air shutter and control of motorized air outlet grille, if present
- Management of diagnostics with specific code for type of error

Dimensions: 184X82X27 mm

The thermostat is connected to the unit by means of a shielded twisted pair at a distance of up to 15 m. For connections to the ELFOControl network, refer to the specific sections.

Separately supplied accessories

HID-T3 - HID-T3 electronic ambient control

The HID-T3 room climate control makes it possible to interface with the regulation module of units equipped with ClivetTalkTerminal Space electronics and to manage one or more thermostat units. The room thermostat allows the following functions:

- Setting of desired temperature
- Change Summer/winter automatically or manually with digital input
- Selection of economic operation
- Setting of unit operation parameters-Setting of fan-only mode
- Control of external air shutter and control of motorized air outlet grille, if present
- Management of humidity probe
- Humidity display-Management of diagnostics with specific code for type of error

Dimensions: 184X82X27 mmThe thermostat is connected to the unit by means of a shielded twisted pair at a distance of up to 15 m. For connections to the ELFOControl network, refer to the specific sections.

Separately supplied accessories

SP1 - RS485 remote communication serial port

The serial port with MODBUS protocol allows the cable connection between the units and the ELFOControl system, allowing the operation parameters control and modification.
