Clivet is taking part in the EUROVENT certification programme up to 1.500 kW.
The products concerned appear in the certified products list of the EUROVENT
www.eurovent-certification.com site.

Features and benefits

ELFOEnergy Magnum: modular scroll technology for every application

WSAN-XEM 50.4 ÷ 120.4

- Air cooled heat pump
- EXCELLENCE high efficiency version
- Partial recovery of the condensing heat

WSAT-XEM 50.4 ÷ 120.4

- Air cooled water chiller
- EXCELLENCE high efficiency version
- PREMIUM compact version
- Total/partial recovery of the condensing heat

WSAN-XEM MF 50.4 ÷ 120.4

- Air cooled heat/cool heat pump with simultaneous operating
- EXCELLENCE high efficiency version
- 4-pipe system
- 2-pipe system and total condensing heat recovery

WSAN-XEM HW 35.4 ÷ 60.4

- Air cooled heat pump
- EXCELLENCE high efficiency version
- Production of hot water up to 65°C
- Extended operating range

Standard unit technical specifications

Compressor

High efficiency hermetic orbiting scroll compressor complete with oil charge, motor over-temperature and over-current devices and protection against excessive gas discharge temperature with oil heater, which starts automatically, keeps the oil from being diluted by the refrigerant when the compressor stops.

Compressors, fitted on rubber antivibration mounts to prevent transmission of noise and vibration, are connected in TANDEM on a single refrigerating circuit with biphasic oil equalisation, it allows to reach high efficiency at partial load.

Uniform compression process with reduced number of moving parts which ensure very low levels of noise and vibration.

Structure

Structure and base made entirely of sturdy sheet steel, thickness of 30/10 or 40/10, with the surface treatment in Zinc-Magnesium painted, for the parts in view, with polyester powder RAL 9001 that guarantees excellent mechanical characteristics and high corrosion strength over time.

Internal exchanger

Direct expansion heat exchanger, braze-welded AISI 316 stainless steel plates, in pack without seals using copper as the brazing material, with low refrigerant charge and large exchange surface, complete with:

- external thermal insulation no-condensation, thickness 9,5 mm, in extruded elastomer foam with closed cells;
- differential pressure switch, water side;
- antifreeze heater to protect the water side exchanger, preventing the formation of frost if the water temperature falls below a set value.

Maximum operating pressure exchanger: 10 bar on the water side

External exchanger

Finned exchanger, made from copper pipes arranged in staggered rows and mechanically expanded for better adherence to the collar of the fins. The exchangers are planned, designed and produced directly by CLIVET. The fins are made of aluminium and special corrugated surface, set a suitable distance apart to ensure maximum heat exchange efficiency. A proper liquid supply of the expansion valve is ensured by the subcooling circuit. Each finned heat exchanger is directly cooled by the air flow of its specific fans.

Fan

Axial fans with high performance and low-noise, balanced statically and dynamically, with blades in aluminum sheet coated in PP and sickle profile terminating with "Winglets", Wall ring in sheet steel pre-galvanised, directly coupled to the three-phase electric motor with external rotor and IP54 protection and class F insulation. Fans are located in aerodynamically shaped structures, equipped with accident prevention steel guards. Supplied with variable speed control (phase-cutting).

Refrigeration circuit

Two independent refrigeration circuits made of copper, brazed and factory-assembled, complete with:

- anti-acid dehydrator filter with solid cartridge replaceable;
- liquid flow and humidity indicator;
- high pressure safety pressure switch;
- high and low pressure transducer;
- refrigerant temperature probe;
- electronic expansion valve;
- safety valve for high and low pressure;
- cutoff valve on compressor supply
- cut-off valve on liquid line.

Suction pipes thermally insulated with highly flexible EPDM rubber closed-cell elastomer insulation. Each cooling circuit is tested under pressure for leaks and is supplied complete with load of refrigerant gas.

Electrical panel

The capacity section includes:

- main door lock isolator switch
- isolating transformer for auxiliary circuit power supply
- on-off "C1" and "C2" scroll compressor protection magneto-thermic
- inverter scroll compressor protection fuses (size from 50.4 to 65.4)
- fan overload circuit breakers (size from 70.4 to 120.4)
- on-off "C1" and "C2" scroll compressor control contactor

The control section includes:

- interface terminal with graphic display
- display of the set values, the error codes and the parameter index
- keys for ON/OFF control, alarm reset
- proportional-integral water temperature control
- daily, weekly programmer of temperature set-point and unit on/off
- set point compensation in function of the outdoor air temperature
- set-point compensation with signal 0-10 V
- unit switching on management by local or remote (serial)
- antifreeze protection water side
- compressor overload protection and timer
- prealarm function for water antifreeze and high refrigerant gas pressure
- self-diagnosis system with immediate display of the fault code
- automatic rotation control for compressor starts
- compressor operating hour display
- remote ON/OFF control
- relay for remote cumulative fault signal
- inlet for demand limit (power input limitation according to a 0÷10V external signal)
- digital input for double set-point enabling
- potential-free contacts for compressor status
- phase monitor
- ECOSHARE function for the automatic management of a group of units
- numeration of electrical panel cables

Standard unit technical specifications

Accessories

- Partial energy recovery
- Total energy recovery (only for EXCELLENCE version)
- Storage tank
- Copper / aluminium condenser coil with acrylic lining
- Condenser coil with Aluminium Energy Guard DCC treatment
- Diffuser for high efficiency axial fan
- Device for fan consumption reduction of the external section, ECOBREEZE type
- Device for fan consumption reduction of the external section, on/off type
- Disposal for inrush current reduction
- Multi-function phase monitor
- Serial communication module for BACnet supervisor
- Serial communication module for Modbus supervisor
- Serial communication module for LonWorks supervisor
- Power factor correction capacitors ($\cos\phi > 0.9$)
- Finned coil protection grill
- High and low pressure gauges
- Cutoff valve on compressor supply and return
- Refrigerant leak detector with pump down function in the casing
- Electrical panel antifreeze protection for min. outdoor temperature down to -20°C
- Electrical panel antifreeze protection for min. outdoor temperature down to -25°C
- Remote control (Accessories separately supplied)
- Steel mesh strainer on the water side (Accessories separately supplied)
- User side DHW switching valve (Accessories separately supplied)
- Anti-vibration mount support (Accessories separately supplied)

Test

Unit subjected to factory-tested in specific steps and test pressure of the piping of the refrigerant circuit (with nitrogen and hydrogen), before shipping them.

Standard unit technical specifications

Unit equipment with low outdoor temperatures

MINIMUM OUTDOOR AIR TEMPERATURE		OPERATING UNIT	⁽⁵⁾ UNIT IN STAND-BY (fed unit)	UNIT IN STORAGE (unit not fed)
+11°C	1	STANDARD UNIT		
+2°C	2		STANDARD UNIT	STANDARD UNIT ⁽⁶⁾
-5°C	4			
-7°C	3			
-10°C	4			
Tra -10°C e -20°C		NOT POSSIBLE	WATER EMPTY UNIT OR WITH AN APPROPRIATE GLYCOL PERCENTAGE ELECTRICAL PANEL ANTIFREEZE PROTECTION (RE -20) NOT SUITABLE: BUILT-IN PUMPS	NOT POSSIBLE
Tra -20°C e -25°C		NOT POSSIBLE	WATER EMPTY UNIT OR WITH AN APPROPRIATE GLYCOL PERCENTAGE ELECTRICAL PANEL ANTIFREEZE PROTECTION (RE -20) NOT SUITABLE: BUILT-IN PUMP	NOT POSSIBLE

Data referred to the following conditions:

- internal exchanger water = 12/7°C

1. Part load unit and air speed equal to 1 m/s.
2. Part load unit and air speed equal to 0.5 m/s.
3. Part load unit and outdoor air temperature at rest.
4. Unit at full load and outdoor air temperature at rest.

⁽⁵⁾ The water pumping unit must be fed and connected to the unit according to the manual.

⁽⁶⁾ Unit without water or containing water with an appropriate quantity of glycol.

At the unit start-up the water temperature or water with glycol must be inside the operating range indicated in the "Operating range" graph.

To know the water freezing temperature on varying the glycol percentage refer to the specific 'Correction factors for glycol use' table.

Air conditions which are at rest are defined as the absence of air flowing towards the unit. Weak winds can induce air to flow through the exchanger and air-levels which can cause a reduction in the operating range. In the presence of predominant winds it is necessary to use suitable windbreak barriers.

Unit configuration

WSAT-XEM	50	.4	EXC	SC	CCS	CREFB	=	=	=
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)

(1) Range

WSAT = Air-cooled liquid chiller

XEM = ELFOEnergy Magnum range with multiscroll compressors and R-410A refrigerant

(2) Size

50 = Nominal compressor capacity (HP)

(3) Compressors

.4 = Compressor quantity

(4) Energy version

EXC = EXCELLENCE Version

PRM = PREMIUM Version

(5) Acoustic configuration

SC = Acoustic configuration with compressor soundproofing

EN = Super-silenced acoustic configuration

(6) Condenser coils

CCS - Copper / aluminium condenser coil (standard)

CCCA - Copper / aluminium condenser coil with acrylic lining

CCCA1 - Copper / aluminium condensing coils with Aluminium Energy Guard DCC treatment

(7) Fans

CREFP = Device for fan consumption reduction of the external section at variable speed (phase-cutting)

CREFB = Device for fan consumption reduction of the external section ECOBREEZE type (standard size 70.4 ÷ 120.4)

CREFO = Device for fan consumption reduction of the external section ON/OFF type (only for PREMIUM version)

(8) Diffuser for fans

(-) Not required (standard)

HEDIF - Diffuser for high efficiency axial fan (only for size 70.4 ÷ 120.4)

(9) Condensation heat recovery

(-) Not required (standard)

D - Partial energy recovery

R = Total energy recovery (only for EXCELLENCE version)

(10) Pumping unit

(-) Not required (standard)

VARYP = Varyflow + (2 inverter pumps)

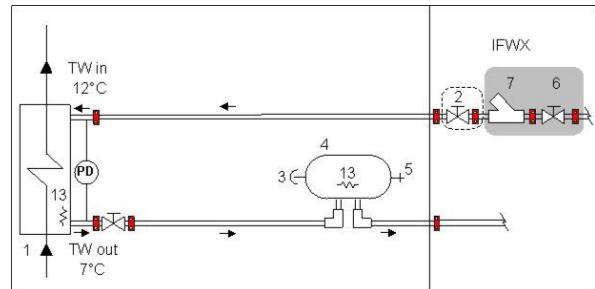

HYG1 = Hydronic assembly with 1 on/off pump

HYG2 = Hydronic assembly with 2 on/off pumps

ACC

Storage tank

Option supplied built-in the unit. Steel storage tank complete with double layer covering with closed-cell insulation, stainless steel anti-freeze immersion resistance, bleed valve, draw off cock, cast-iron shut-off butterfly valve with quick connections and activation lever with a mechanical calibration lock at the evaporator output, quick connections with insulated casing. For sizes 50.4 ÷ 65.4 the storage tank capacity is 300L. For sizes 70.4 ÷ 120.4 the storage tank capacity is 500L.

- 1- Internal exchanger
 2- Cutoff valve
 3- Purge valve
 4- Storage tank with antifreeze electric heater
 5- Discharge stop valve
 6- Cutoff valve
 7- Steel mesh strainer on the water side
 13- Antifreeze heater
 TW in Chilled water inlet
 TW out Chilled water outlet
 IFWX = Steel mesh strainer on the water side
 T - Temperature probe
 PD - Differential pressure switch

CCCA

Copper/aluminium condenser coil with acrylic lining

Coils with copper pipes and aluminium fins with acrylic lacquering. Can be used in settings with moderately aggressive saline concentrations and other chemical agents.

Attention!

- cooling capacity variation -2.7%
- variation in compressor power input +4.2%
- operating range reduction -2.1°C

CCCA1

Condenser coil with Energy Guard DCC Aluminum

A treatment which offers an optimal thermal exchange and guarantees and protects the finned coil exchangers from corrosion over time. Can be used in settings with very aggressive saline concentrations and other chemical agents in the air thus maintaining the performance of the coils over time.

HEDIF

Diffuser for high efficiency axial fan

The AxiTop diffuser creates an ideal air distribution: it aerodynamically decelerates the flow and transforms a big part of its kinetic energy in static pressure.

Obtaining:

- down to -3 dB of silence
- reduction of 3% of the absorbed energy

Since the fans are the unit's main noise source, the benefits are evident especially during the night hours, when the load is reduced but sensitivity to noise is enhanced.

Available only for size 70.4 ÷ 120.4.

CREFB

Device for consumption reduction of the external section ECOBREEZE fans

Axial fans with sickle profile blades terminating with "Winglets", directly coupled to the electronic controlled motor (IP54), driven by the magnetic switching of the stator. The brushless technology and the special supply increase both the life expectancy and the efficiency. As a result the electric consumption is reduced up to 50%. Fans are housed in aerodynamically shaped structures to increase efficiency and reduce noise level. The assembly is protected by accident prevention guards.

Available for size 70.4 ÷ 120.4.

CREFO

Device for fan consumption reduction of the external section, on/off type

Option that affects the external axial fans, as an alternative of the control device at variable speed, standard supplied. It requires the three-phase electric motor with an external rotor and built-in thermal protection, IP54 in progress. The condensation pressure automatic control occurs by the switching on or off of fans of the whole fan section.

Available only for Version PREMIUM.

⚠ The choice of this option limits the operating range in cooling with outdoor air temperatures higher than +15°C.

SFSTR

Disposal for inrush current reduction

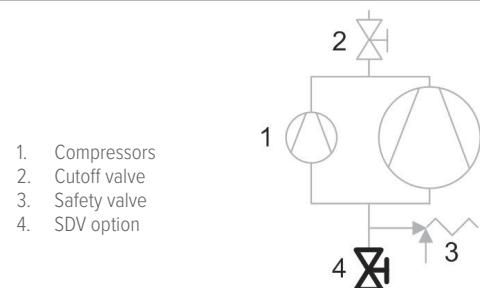

Electronic device that automatically and gradually starts the compressors, thereby reducing the current peak generated in star-triangle start-ups and therefore reduces the mechanical stress on the motor and the electrodynamic stress on the power cables and on the mains.

For sizes 50.4 ÷ 65.4 the disposal for inrush current reduction is for supply voltage 400/3/50 + N.

For sizes 70.4 ÷ 120.4 the disposal for inrush current reduction is for supply voltage 400/3/50.

Built-in options

MF2	Multi-function phase monitor The multifunction phase monitor controls all phases and their sequence, checks for voltage anomalies (+/-10%), and automatically restores operation of the unit as soon as the power supply returns to normal. This control allows to: <ul style="list-style-type: none">protect components inside the unit, as if they are powered by an anomalous voltage they may operate incorrectly or break;quickly identify, among the alarms of the unit's components, the real cause of the malfunction due to the sudden change in voltage.
CMSC8	Serial communication module to BACnet supervisor This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems. The device is installed and wired built-in the unit.  The configuration and management activities for the BACnet networks are the responsibility of the client.  The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)
CMSC9	Serial communication module to Modbus supervisor This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems. The device is installed and wired built-in the unit.  The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)
CMSC10	Serial communication module to LonWorks supervisor This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard. The device is installed and wired built-in the unit.  The configuration and management activities for the LonWorks networks are the responsibility of the client.  LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.
PFCP	Power-factor correction capacitors (cosfi > 0,9) The component is necessary to lower the phase difference between current and voltage in the electromagnetic components of the unit (e.g. asynchronous motors). The component allows to put the cosfi power factor to values on average higher than 0.9, reducing the network reactive power. This often leads to an economic benefit which the energy provider grants to the final user.
PGFC	Finned coil protection grill This accessory is used to protect the external coil from the accidental contact with external things or people. Ideal for installation in places where persons can pass from, such as car parks, terraces, etc.
MHP	High and low pressure gauges Despite the unit already enabling a series of digital displays on the operating pressure of the refrigeration circuit, this option enables analogical measuring of refrigerant pressures at compressor intake and supply thus easing the checking of these parameters for the technicians who are managing the unit. The two liquid pressure gauges and related pressure sensors are attached built-in in easily accessible positions.
SDV	Cutoff valve on compressor supply and return An option which integrates the supply cutoff valve, which is supplied as standard. The presence of the cock at the intake as well enables the compressors to be isolated and substituted without discharging the refrigerant from within the refrigeration circuit. This means that the extraordinary maintenance activities are facilitated. Device installed built-in the unit.

RPRPDI

Refrigerant leak detector with pump down function in the casing

Leak detector device built-in installed and placed inside the compressor box. It detects leaks of the internal refrigeration circuit and automatically enables the “pump-down” function, storing the refrigerant inside the finned coil exchanger. During pump-down, cooling capacity is not produced by the unit. At the end of the operation the unit is switched off and a dedicated alarm signal is available directly inside the electrical panel.

The device respects BREEAM regulations.

RE-20 / RE-25

Electrical panel anti-freeze protection

It includes self-regulating electric heaters with thermostat which are able to protect the electrical panel against condensation and frost guaranteeing its correctly functions down to -20°C or -25°C. This accessory operates even when the unit is switched off provided that the power supply is maintained active and the unit continues to be electrically connected.

Device installed and wired built-in the unit.

- ⚠ This accessory operates even when the unit is switched off provided that the power supply is maintained active and the unit continues to be connected.
- ⚠ This accessory does not lead to substantial variations in the electrical data for the unit which has been declared in the Electrical Data section.

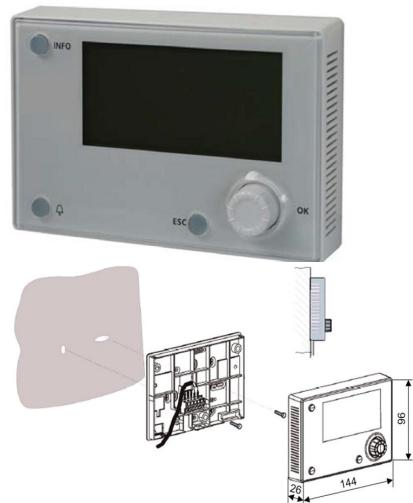

RCTX

Remote control

This option allows to have full control over all the unit functions from a remote position.

It can be easily installed on the wall and has the same aspect and functions of the user interface on the unit

- ⚠ All device functions can be repeated with a normal portable PC connected to the unit with an Ethernet cable and equipped with an internet navigation browser.
- ⚠ The device should be installed on the wall using suitable plugs, electrically hooked up and connected to the unit (installation and wiring are the responsibility of the Customer). Max. remote distance 350 m without auxiliary supply.
- ⚠ Data and power supply serial connection cable n.1 twisted and shielded pair. Diameter of the individual conductor 0.8 mm.

BACX

BACnet serial communication module

Allows the serial connection to supervision systems by using BACnet-IP as a communication protocol. It allows the access to the entire list of operating variables, controls and alarms. With this accessory every unit can communicate with the main supervision systems.

- ⚠ The configuration and management activities for the BACnet networks are the responsibility of the client
- ⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

CMMBX

Serial communication module to supervisor (Modbus)

This enables the serial connection of the supervision system, using Modbus as the communication protocol. It enables access to the complete list of operational variables, commands and alarms. Using this accessory every unit can dialogue with the main supervision systems.

- ⚠ The total length of each serial line do not exceed 1000 meters and the line must be connected in bus typology (in/out)

Accessories separately supplied

CMSLWX

LonWorks serial communication module

This enables the serial connection of the supervision system which uses the LonWorks communication protocol. It enables access to a list of operating variables, commands and alarms which comply with the Echelon® standard.

⚠ The configuration and management activities for the LonWorks networks are the responsibility of the client.

⚠ LonWorks technology uses the LonTalk® protocol for communicating between the network nodes. Contact the service supplier for further information.

PGFCX

Finned coil protection grill

This accessory is used to protect the external coil from the accidental contact with external things or people. Ideal for installation in places where persons can pass from, such as car parks, terraces, etc.

⚠ This option is not suitable for application in sulphuric environments

MHPX

High and low pressure gauges

Despite the unit already enabling a series of digital displays on the operating pressure of the refrigeration circuit, this option enables analogical measuring of refrigerant pressures at compressor intake and supply thus easing the checking of these parameters for the technicians who are managing the unit. The two liquid pressure gauges and related pressure sensors are attached built-in in easily accessible positions.

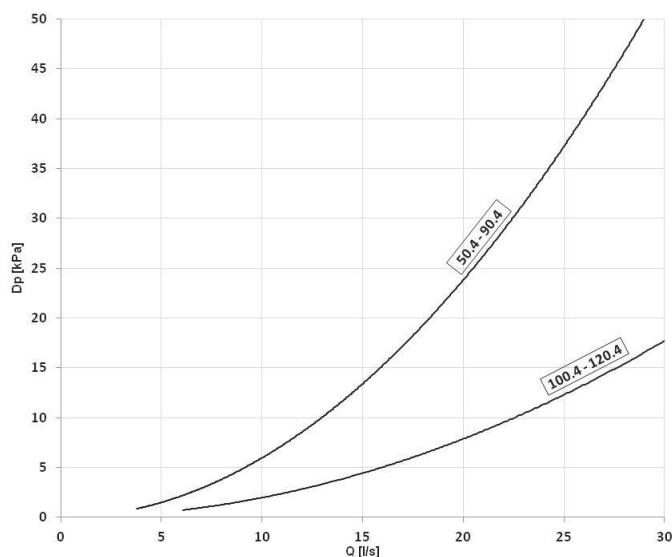

IFWX

Steel mesh strainer on the water side

The device prevents any impurity in the hydraulic circuit from soiling the exchanger. The stainless steel mesh mechanical filter must be placed on the water inlet line. It needs to be easy to remove for periodical maintenance and cleaning operations. Moreover, it consists of:

- cast-iron shut-off butterfly valve with quick coupling and throttle drive and mechanical calibration stop
- quick couplings with an insulated casing

Steel mesh strainer pressure drops

Q = Water flow rate (l/s)
DP = Water side pressure drops (kPa)

AVIBX

Anti-vibration mount support

The spring antivibration mounts are attached in special housing on the support frame and serve to smooth the vibrations produced by the unit thus reducing the noise transmitted to the support structure.

Performance - Excellence

The Product is compliant with the Erp (Energy Related Products) European Directive. It includes the Commission delegated Regulation (EU) No 2016/2281, also known as Ecodesign Lot21.
 'Contains fluorinated greenhouse gases'(GWP 2087,5)

1. Data referred to the following conditions: internal exchanger water temperature = 12 / 7 °C Entering external exchanger air temperature = 35°C Evaporator fouling factor = 0.44 x 10⁻⁴ m² K/W
2. The Total Power Input value does not take into account the part related to the pumps and required to overcome the pressure drops for the circulation of the solution inside the exchangers
3. Option. Recovery exchanger water = 40/45°C
4. Data compliant to Standard EN 14511:2018 referred to the following conditions: - Internal exchanger water temperature = 12/7°C - Entering external exchanger air temperature = 35°C
5. Data compliant to Standard AHRI 550/590 referred to the following conditions: internal exchanger water temperature = 6,7 °C. Water flow-rate 0,043 l/s per kW. Entering external exchanger air temperature 35°C. Evaporator fouling factor = 0.18 x 10⁻⁴ m² K/W
6. Data calculated according to the EU 2016/2281 Regulation

Sound levels refer to units with full load under nominal test conditions.

The sound pressure level refers to a distance of 1 meter from the outer surface of the unit operating in open field.

Measures are according to UNI EN ISO 9614-2 regulations, with respect to the EUROVENT 8/1 certification, which provides for a tolerance of 3 dB(A) on the sound power level, which is the only acoustic data to be considered binding.

Data referred to the following conditions:

Internal exchanger water = 12/7°C

Ambient temperature = 35 °C

kWf = Internal exchanger cooling capacity (kW)

kWe = Compressor power input (kW)

To (°C) = Leaving internal exchanger water temperature (°C)

Performances in function of the entering/leaving water temperature differential = 5°C

Internal exchanger pressure drop curves

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow-rate [l/s]

Dp = Pressure drop [Pa]

The water flow rate must be calculated with the following formula

$$Q \text{ [l/s]} = \text{kWf} / (4,186 \times DT)$$

kWf = Cooling capacity [kW]

DT = Temperature difference between entering / leaving water.

⚠ To the internal exchanger pressure drops must be added the pressure drops of the steel mesh mechanical strainer that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as Clivet option (IFWX). If the mechanical filter is selected and installed by the Customer, it is forbidden the use of filters with the mesh pitch higher than 1,6 mm, because they can cause a bad unit operation and also its serious damaging.

! To the internal exchanger pressure drops must be added the pressure drops of the steel mesh mechanical strainer that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as Clivet option (IFWX). If the mechanical filter is selected and installed by the Customer, it is forbidden the use of filters with the mesh pitch higher than 1,6 mm, because they can cause a bad unit operation and also its serious damaging.

Performances

Internal exchanger pressure drop curves

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow-rate [l/s]

D_p = Pressure drop [Pa]

The water flow rate must be calculated with the following formula

$$Q \text{ [l/s]} = kWf / (4,186 \times DT)$$

kWf = Cooling capacity [kW]

DT = Temperature difference between entering / leaving water.

- ⚠** To the internal exchanger pressure drops must be added the pressure drops of the steel mesh mechanical strainer that must be placed on the water input line. It is a device compulsory for the correct unit operation, and it is available as Clivet option (IFWX). If the mechanical filter is selected and installed by the Customer, it is forbidden the use of filters with the mesh pitch higher than 1,6 mm, because they can cause a bad unit operation and also its serious damaging.

D - Partial energy recovery

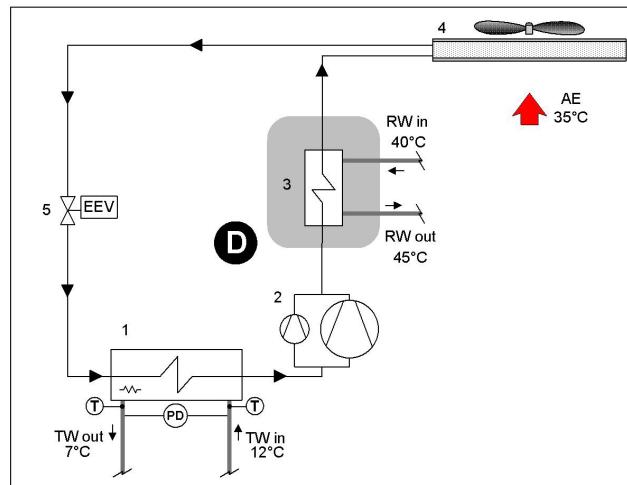

Configuration with recovery side brazed stainless steel (316 AISI) plate exchangers, and components per the legend of the enclosed plumbing circuit diagram. All water fittings are Victaulic type.

A configuration which enables the production of hot water free-of-charge while operating in the cooling mode, thanks to the partial recovery of condensation heat that would otherwise be rejected to the external heat source. It is possible to recover about 20% of the unit rejected heating capacity equal to the sum of the cooling capacity and the compressor power input.

The partial recovery device is considered to be operating when it is powered by the water flow which is to be heated. This condition improves the unit performance, since it reduces the condensation temperature: in nominal conditions the cooling capacity increases indicatively by 3.2% and the power input of the compressors is reduced by 3.6%.

Hot water availability is always subordinate to the production of chilled water. The heating capacity request is made by the digital contact enabling, that activates the pump recovery side (outside the unit)

The partial energy recovery option (D) is available both in the EXCELLENCE (EXC) and PREMIUM (PRM) configuration.

D - Partial recovery device

Partial energy recovery pressure drop curves

The pressure drops on the water side are calculated by considering an average water temperature at 7°C.

Q = Water flow-rate [l/s]
DP = Pressure drops [kPa]

Partial recovery heating capacity

$kWde/kWF$ = Heat recovered/Cooling capacity [%]
 Tde = Heat recovering device outlet water temperature [°C]

Configurations

R - Total energy recovery

Configuration with recovery side brazed stainless steel (316 AISI) plate exchangers, ON/OFF solenoid valves, temperature sensors on the supply and return of the hot water circuit and components according to the key on the diagram shown below.

A configuration which enables the production of hot water free-of-charge while operating in the cooling mode, thanks to the total recovery of condensation heat that would otherwise be disposed of into the external heat source. A configuration which enables the production of hot water free-of-charge while operating in the cooling mode, thanks to the partial recovery of condensation heat that would otherwise be rejected to the external heat source. It is possible to recover approximately 100% of the rejected unit heating capacity equal to the sum of the cooling capacity and the relative compressor power input.

Hot water availability is always subordinate to the production of chilled water. The heating capacity request is made by the digital contact enabling, that activates the pump recovery side (outside the unit).

See the following example:

1. cooling capacity request = 100% / Heating capacity request = 0% >Production only of cooling capacity;
2. cooling capacity request = 100% / Heating capacity request = 0% >Production of cooling and heating capacity by recovery;
3. cooling capacity request = 50% / Heating capacity request = 100% >Production of cooling and heating capacity by recovery, equal to the 50% of the requested heating capacity.

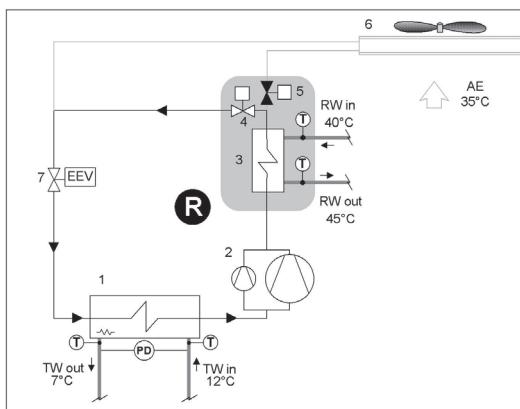

The total energy recovery (R) is available only in the EXCELLENCE (EXC) configuration.

⚠ To prevent constant switching in the unit's refrigeration circuit, it is necessary to install a storage tank with an adequate capacity in the system's hot water circuit.

⚠ In the absence of hot water circulation in the recovery exchanger, the maximum inlet air temperature is reduced by approximately 2°C compared with the unit without "Total Energy Recovery" mode.

Total operating energy recovery

The pump on the recovery exchanger must be activated when hot water is required. Condensation takes place entirely in the recovery circuit

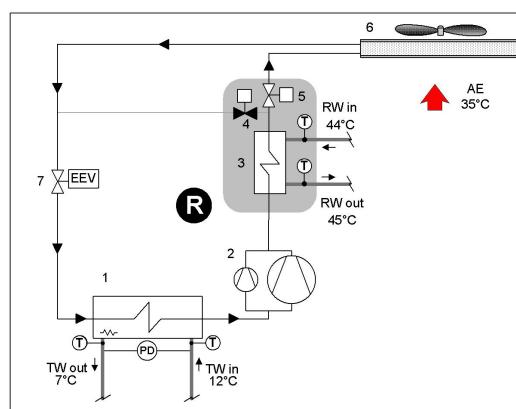

R - Total recovery device

- 1 - Internal exchanger
- 2 - Compressors
- 3 - Recovery exchanger
- 4 - Total recovery enabling valve
- 5 - External exchanger enabling valve
- 6 - External exchanger

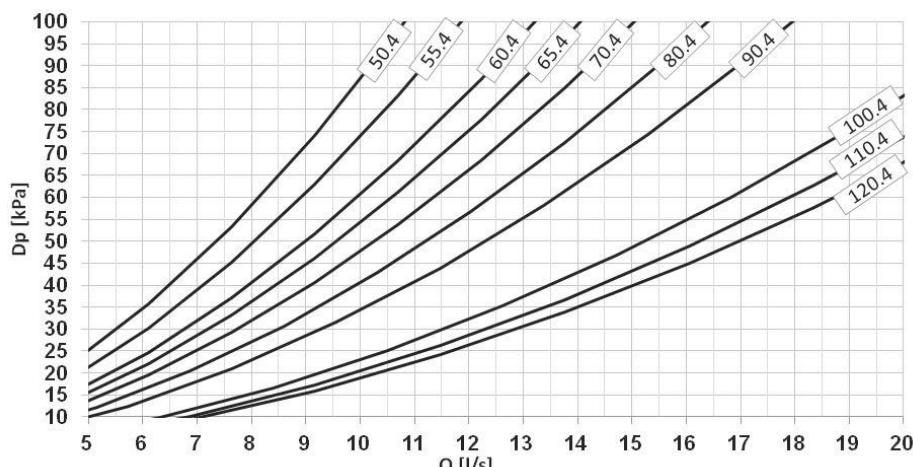

Total non-operating energy recovery

When the recovery set-point has been satisfied, the condensing coil is reactivated. In this condition, the total recovery circuit operates as a Partial recovery circuit (Desuperheater).

- 7 - Expansion electronic valve
- T - Temperature probe
- PD - Differential pressure switch
- TW in - chilled water inlet
- TW out - chilled water outlet
- RW in - Recovery water inlet
- RW out - Recovery water outlet
- AE - Outdoor air

Pressure drops of the total energy recovery exchanger

Q = Water flow-rate [l/s]
DP = Water side pressure drops [kPa]

Accessories - Hydronic assembly

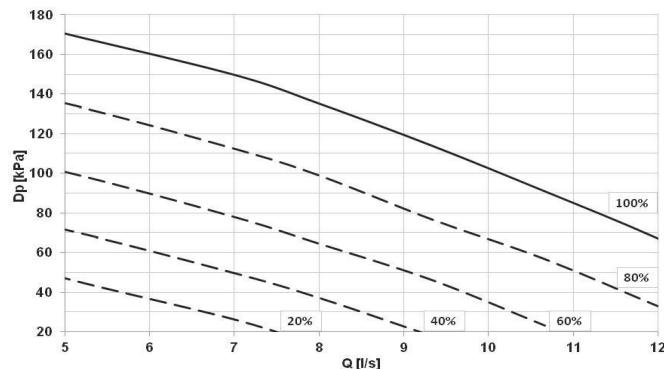

VARYP - VARYFLOW+ (2 inverter pumps)

Configuration with 2 centrifugal electric pumps arranged in parallel and controlled by inverter, with housing and impeller made with AISI 304 stainless steel, and components as described on the water diagram key. All water fittings are Victaulic type.

The electric pumps are equipped with three-phase electric motor with IP55-protection and complete with thermoformed insulated casing.

The control, modulates the water flow-rate keeping constant the delta T. If the water temperature is in critical conditions, it allows to extend the unit operating ranges guaranteeing its operating, automatically reducing the water flow-rate. In the event of one of the two pumps is temporarily unavailable, it guarantees about the 80% of the nominal flow-rate.

Pressure head VARYFLOW+ (Size 50.4 ÷ 65.4)

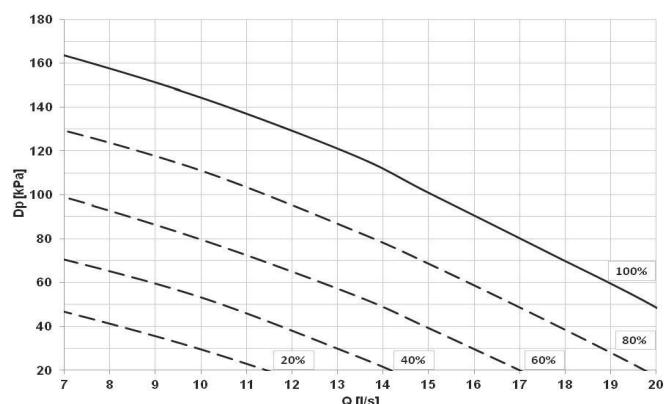

Q = Water flow-rate [l/s]

DP = Pressure head [kPa]

⚠ Caution: to obtain the available pressure values, you need to subtract the following from the head values represented in these diagrams:
